

Cyber Tips for Holiday Shopping

Keeping our organization's data safe.

Enterprise Information
Security Program

From the Desk of Ron Jimerson, Chief Information Security Officer

The holidays are right around the corner and that means food, fun, parties, and lots of online shopping. Online shopping can be a great solution, allowing you to find the perfect gift and saving time, but it can also end with identity theft, malware, and other cyber unpleasantness. Rather than letting it ruin your holiday season, you can take a few simple security precautions to help reduce the chances of being a cyber victim.

When purchasing online this holiday season – and all year long – keep these tips in mind to help minimize your risk:

- 1. Do not use public computers or public wireless Internet access for your online shopping.** Public computers and wireless networks may contain viruses and other malware that steal your information, which can lead to identity theft and financial fraud.
- 2. Secure your computer and mobile devices.** Be sure to keep the operating system, software, and/or apps updated/patched on all of your computers and mobile devices. Use up-to-date antivirus protection and make sure it is receiving updates.
- 3. Use strong passwords.** The use of strong, unique passwords is one of the simplest and most important steps to take in securing your devices, computers, and online accounts. If you need to create an account with the merchant, be sure to use a strong, unique password. Always use more than ten characters, with numbers, special characters, and upper and lower case letters. Use a unique password for every unique site. The August Newsletter contains more information about the dangers of password reuse and is available at: <http://msisac.cisecurity.org/newsletters/2015-08.cfm>
- 4. Know your online shopping merchants.** Limit your online shopping to merchants you know and trust. If you have questions about a merchant, check with the Better Business Bureau or the Federal Trade Commission. Confirm the online seller's physical address, where available, and phone number in case you have questions or problems. Do not create an online account with a merchant you don't trust.
- 5. Pay online with one credit card.** A safer way to shop on the Internet is to pay with a credit card

rather than debit card. Debit cards do not have the same consumer protections as credit cards. Credit cards are protected by the

have

Fair

Credit Billing Act and may limit your liability if your information was stolen or used improperly. By using one credit card, with a lower balance, for all your online shopping you also limit the potential for financial fraud to affect all of your accounts. Always check your statements regularly and carefully, though.

6. **Look for "https" in the Internet address (URL) when making an online purchase.** The "s" in "https" stands for "secure" and indicates that communication with the webpage is encrypted. This helps to ensure your information is transmitted safely to the merchant and no one can spy on it. Alternatively, look for the lock symbol (it's sometimes green) in the Internet address bar.
7. **Do not respond to pop-ups.** When a window pops up promising you cash or gift cards for answering a question or taking a survey, close it by pressing Control + F4 on a Windows computer and Command + W on a Mac. These could be social engineering attempts designed to convince you to open malware or click on a malicious link.
8. **Do not auto-save your personal information.** When purchasing online, you may be given the option to save your personal information online for future use. Consider if the convenience is really worth the risk. The convenience of not having to reenter the information is insignificant compared to the significant amount of time you'll spend trying to repair the loss of your stolen personal information.
9. **Use common sense to avoid scams.** Don't give out your personal or financial information via email or text. Information on many current scams can be found on the website of the Internet Crime Complaint Center: <http://www.ic3.gov/default.aspx> and the Federal Trade Commission: <http://www.consumer.ftc.gov/scam-alerts>.
10. **Review privacy policies.** Review the privacy policy for the website/merchant you are visiting. Know what information the merchant is collecting about you, how it will be stored, how it will be used, and if it will be shared with others.

What to do if you encounter problems with an online shopping site:

Contact the seller or the site operator directly to resolve any issues. You may also contact the following:

- Your state's Attorney General's Office or Consumer Protection Agency
- The Better Business Bureau - www.bbb.org
- The Federal Trade Commission - <http://www.ftccomplaintassistant.gov>

The information provided in the Monthly Security Tips Newsletter is intended to increase the security awareness of an organization's end users and to help them behave in a more secure manner within their work environment. While some of the tips may relate to maintaining a home computer, the increased awareness is intended to help improve the organization's overall cyber security posture. This is especially critical if employees access their work network from their home computer. Organizations have permission and are encouraged to brand and redistribute this newsletter in whole for educational, non-commercial purposes.
