DEVELOPMENT REGULATORY AGREEMENT BY AND BETWEEN
THE METROPOLITAN PARK DISTRICT FOR TACOMA AND THE CITY OF TACOMA

This DEVELOPMENT REGULATORY AGREEMENT (this “Agreement”) is entered into this 22nd day of December, 2015, by and between the Metropolitan Park District of Tacoma, a municipal corporation (“Metro Parks”) and the City of Tacoma, a municipal corporation and first class city of the state of Washington (“City”) (collectively the “Parties”). The Parties hereby recite and agree to the following terms and conditions listed below:

RECITALS

1. The Parties enter into this Agreement in order to provide an “umbrella” regulatory backdrop against which Metro Parks’ Destination Point Defiance Master Plan will be overseen by the City in its regulatory role and implemented by Metro Parks over a potentially extended time period.

2. The Parties understand and acknowledge that this Agreement addresses development considerations and processes only at the most basic level and does not excuse either party from compliance with applicable laws in developing the subject property.

A. AUTHORITY: This Agreement is entered into pursuant to the authority found in RCW 36.70B 170-210, City of Tacoma Comprehensive Plan Open Space Policy OS-SP-2, and Tacoma Municipal Code TMC 13.05.095, as well as RCW 39.34.

B. SCOPE: This Agreement authorizes all land-uses and activities set forth and described along the general lines, locations and schedule set forth in Metro Parks’ Destination Point Defiance Master Plan (Attachment A to this Agreement; hereinafter the “Master Plan”). These land-uses and activities are vested for the 20 year life of this Agreement. However, land-uses and activities that require shoreline permits, critical area review and permitting, historic review under TMC Chapter 13.07 or as amended, or storm water approvals will only vest upon the filing of a complete building permit that attaches to that particular project under the Master Plan; accessibility under the Americans with Disabilities Act will be addressed under building code review for each project. The vesting established by this Agreement is limited to zoning and land-uses identified in the Master Plan. After the effective date of this Agreement, the uses set forth in the Master Plan shall be deemed approved, subject to implementing permits and processes for the effective period of this Agreement, and any permit or approval issued by the City after the execution of this Agreement must be consistent with this Agreement.

C. GENERAL CONDITIONS: The following conditions are requirements on all projects applying under TMC 13.05.095 (DRAs):

1. Best available science and best management practices shall be used to address critical areas in locations within, and projects set forth in the Master Plan. Mitigation for impacts to critical areas and/or buffer shall be per TMC 13.11.270, General Mitigation Requirements, or as amended.
2. All project development will provide some level of environmental sustainability. This is attributable to the design and management of the environment, including stormwater systems and Low Impact Development (LID), in addition to other sustainable decisions that may include building certification through programs such as Leadership in Energy and Environmental Design (LEED).

3. No variances or discretionary permits may be applied for. Changes to standards may only be secured by amendment to this Agreement.

D. PROJECT SPECIFIC STANDARDS AND MITIGATIONS: The following conditions have been developed after Planning and Development Services’ Director review of the Master Plan’s SEPA Checklist and SEPA Checklist supporting documents, public comments submitted under TMC 13.02.05 and 13.02.045.H, and public comments at the October 13, 2015 public hearing:

1. All forest stewardship and landscaping standards within the Master Plan will be established by Metro Parks in strict accordance with the “Point Defiance Stewardship Plan, June 30, 2010” (SEPA Checklist Appendix E). Particular attention shall be paid to the forest management objectives set forth in pages 2 and 3 of this Plan and to the ‘Stand Management Objectives and Policies’ set forth on pages 18-21. More specifically, the two areas in the western part of the Forest Zone designated as Washington Natural Heritage Sites shall receive the highest level of protection (pages 21 and 22) and the bald eagle habitat recommendations (page 22) shall be adhered to. As to ‘fire prevention and suppression’ (pages 22 and 23) a further consideration will apply – see D1A.

1a. While fire protection measures will be addressed in the developed areas of the Park at the building permit stage, in the undeveloped areas of the Park the Parties commit to the following consultative process: (1) meet within three months of execution of this Agreement to identify and agree upon a scope of work for a fire risk assessment, (2) Metro Parks will commission a report that addresses capital improvements and operational practices to address the risks identified, and (3) the Parties agree to jointly seek funding for the most cost effective measures identified.

2. All off-street parking standards within the Master Plan will be established by Metro Parks; PROVIDED that every three years Metro Parks will monitor on-street parking in the neighborhoods adjacent to the Master Plan area, submit a written report to the PDS Director, and take corrective action to address any off-site parking problems identified.

3. Consistent with the investigation of the Traffic Impact Analysis Study, the intersection of North Pearl Street and North Park Avenue (entrance/exit from the Park) shall be improved to adequately accommodate the operation, circulation, and safety of all traffic modes using the intersection.
E. OPERATIONS AND SAFETY - CONDITIONS:

1. Corresponding with land use changes within or adjacent to the Park, the intersection of N Pearl Street and N Park Ave (i.e., entrance/exit from the Park) shall be improved to adequately accommodate the operation, circulation, and safety of all traffic modes using the intersection. The Transportation Analysis has indicated that a new roundabout will be constructed at the entrance, and the study’s analysis shows that it can adequately accommodate future traffic demands. Therefore, its construction (assuming adequate design and inclusion of necessary control features) shall be a prerequisite for any Phase 1 (as described in the Transportation Analysis) development or improvements within the Park.

2. Corresponding with land use changes within or adjacent to the Park, the intersection of N Pearl Street and N 51st Street shall be improved to adequately accommodate the operation, circulation, and safety of all traffic modes using the intersection. The Transportation Analysis has indicated that mitigation measures at this intersection can yield acceptable traffic operations corresponding with Phases 1, 2, and 3 (as described in the Transportation Analysis) development and improvements. The mitigation prescribed in the Transportation Analysis will 1) require concurrence from the City of Ruston since the proposed change impacts parking along the north side of North 51st Street east of Pearl Street, 2) may require reconstruction of the roadway/curbs to accommodate the proposed lane configurations, which would require City of Tacoma and Washington State Department of Transportation concurrence, and 3) may require corresponding changes to traffic signal equipment and/or infrastructure. Therefore, all intersection/traffic signal-related improvements shall be a prerequisite for any Phase 1 development or improvements within the Park.

3. Corresponding with land use changes within or adjacent to the Park, the intersection of N Mildred Street and N Park Avenue (alignment) shall be improved to adequately accommodate the operation, circulation, and safety of all traffic modes using the intersection. The Transportation Analysis did not specifically address the intersection control needs at this intersection as it relates to other envisioned roadway/walkway improvements within the Park which are mentioned in the Transportation Analysis. Therefore, in association with any Phase 1 development or improvement within the Park, an intersection design plan will be required to be developed and approved by the City of Tacoma which provides acceptable intersection control features and identifies required improvements for implementation.

4. Corresponding with land use changes within or adjacent to the Park, the segment of N Mildred Street between N Park Avenue (alignment) and N 51st Street shall be mitigated to control excessive vehicle speeds related to traffic arriving at and/or departing from the Park. The Transportation Analysis presented two engineering options along with additional enforcement by police. There are likely other options as well. All options must be comprehensively evaluated by the City of Tacoma for approval and implementation by Metro Parks in conjunction with any Phase 1 development or improvements within the Park.

5. Based on the Transportation Analysis, other public right-of-way intersections and/or roadways are not anticipated to be impacted to a degree that mitigation would be required, but the potential additional mitigation and improvements is expressly reserved by the City of Tacoma pending forthcoming development-specific application reviews.

6. As acknowledged in the Transportation Analysis, with the exception of a small portion of State Highway, “all roads, trails, and parking within Pt. Defiance Park are under the jurisdiction of Metro Parks, including their operation and maintenance.”
F. MOBILITY - CONDITIONS:

1. Intersection and/or roadway improvements shall be required to ensure pedestrian mobility, in accordance with Public Right Of Way Accessible Guide-lines (PROWAG) and Americans with Disabilities Act (ADA), at and within the intersection areas being mitigated.

2. Mitigation and improvements at intersections and along roadways shall consider modifications that retain the capability to accommodate bicyclists.

G. SUMMARY: As mentioned above, the resulting mitigation and improvements resulting from the above conditions are based on the Development Regulation Agreement Transportation Analysis document prepared by the consultant team for Pt. Defiance Park. Its analysis assesses the trip generation and traffic impacts associated with the planned projects as part of the Park’s Master Plan and has inherent assumptions and presentation of information. Should any of these assumptions be found to be in error, to the degree that conclusions and resulting conditions are affected, then the City of Tacoma reserves the right to re-evaluate any conclusions, recommendations, and conditions stipulated.

Within the Transportation Analysis, the various Park projects were grouped into phases (“Phase 1,” “Phase 2,” and “Phase 3”) such that specific mitigation and improvement will only be able to be attributable to those groupings/phases. Therefore, mitigation and improvements deemed necessary to accommodate a given “phase” shall be required as part of the approval process for whichever individual project/improvement/change from the corresponding phase is first scheduled for implementation. The City may consider delayed or deferred implementation of mitigation if additional transportation analysis is provided at a more refined level commensurate with the particular project that shows the specific impacts are not representative of the phase assessed in the Transportation Analysis.

1. For any project conducted pursuant to this Agreement and the Master Plan construction staging areas will be removed as soon as their useful life has ended.

2. Any fill that is brought into the Park for project work shall be clean and from an approved source.

3. Low level, downward shielded external lighting shall be required for all new development and shall be designed to minimize impacts to adjacent properties.

4. The Point Defiance Park Historic Property Management Plan, May 15, 2015 (Appendix H to the SEPA Checklist) shall guide all activities within the Park. Specifically, the Secretary of Interior’s Standards shall be the treatment approach for all historic properties in the Park. Further, the model Inadvertent Discovery Policy included in Appendix H (at H-11) shall be used for all projects within the Park.

5. The trail development and maintenance recommendations set forth in the Geotechnical Consultation Erosion and Landslide Evaluation at Point Defiance, June 11, 2004 shall be adhered to.

H. STORM AND SANITARY SEWER – CONDITIONS:

2. Provide future projected wastewater flows to the City of Tacoma sanitary system. Projected wastewater flows will allow the City of Tacoma to analyze the wastewater systems ability to accommodate future development within the park.

3. Any utility construction, relocation, or adjustment costs shall be at the applicant's expense.

I. CONDITIONS APPLICABLE TO BUILDING/DEVELOPMENT PERMITS:

1. All stormwater shall be managed in compliance with the City of Tacoma Stormwater Management Manual (SWMM) that is in effect at the time of full building permit submittal. The applicant shall review and comply with all applicable SWMM Minimum Requirements.

2. At time of development the downstream stormwater conveyance system shall be reassessed to ensure adequate capacity and function. If capacity or function is found to have been impacted then the downstream system shall be cleaned, repaired, or retrofit to provide adequate stormwater capacity and function.

3. Coverage under the NPDES Construction General Permit is required for any clearing, grading, or excavating that will disturb one or more acres of land area and that may discharge stormwater from the site into surface water(s), or into storm drainage systems that discharge to a surface water, per the Washington State Department of Ecology (Ecology). Contact Ecology's Office of Regulatory Assistance at 1-800-917-0043 to determine if any additional requirements are necessary. Additional information is also available online at http://www.ecy.wa.gov/programs/wq/stormwater/construction/. City approval does not release the applicant from state or other permitting requirements, such as, but not limited to, the Army Corp of Engineers, WDFW, and all other applicable entities.

4. At time of building permit the existing sanitary waste system shall be assessed for adequate capacity and function. Capacity shall meet all City of Tacoma standards and/or the current Uniform Plumbing Code.

5. A new development or redevelopment will be classified as large if the proposed wastewater flow will be equal to or greater than 10% of the capacity of the public sanitary sewer system serving the development or if the development will include 100 units or more. If the project is classified as large, peak daily wastewater flow calculations shall be prepared by a licensed engineer and provided to the City for review. For further information please reference the Side Sewer and Sanitary Sewer Availability Manual.

6. If pumping of sewage is required due to site conditions, plans and calculations for the pump system shall be prepared per City standards and submitted to Environmental Services - Site Development Group for review and approval prior to issuance of a side sewer connection permit.
I. STREETS, DRIVEWAYS AND SIDEWALKS:
1. Congruent with the improvement of the intersection at N Pearl St and N Park Ave, cement concrete sidewalk shall be constructed along N Park Ave, abutting the site, between N Pearl St and the Northeast corner of N Bristol St meeting Public Right Of Way Accessible Guidelines (PROWAG) and Americans with Disabilities Act (ADA) requirements, and be installed to the approval of the City Engineer. Any utility adjustment shall be at the expense of the applicant.
2. Cement concrete sidewalk shall be constructed along the west side of N Mildred St from Five Mile Drive south to the existing sidewalk along N Mildred St at approximately the intersection of N 51st St meeting Public Right Of Way Accessible Guide-lines (PROWAG) and Americans with Disabilities Act (ADA) requirements, and be installed to the approval of the City Engineer. Any utility adjustment shall be at the expense of the applicant.
3. A Work Order is required for any infrastructure to be constructed within the City of Tacoma Right-of-Way. A licensed professional civil engineer must submit the street plans for review and approval following the City's work order process. To initiate a work order, contact the Public Works Private Development at (253) 591-5760. A performance bond is required for all work orders per TMC 10.22.070.F.

K. TACOMA POWER: For utility systems currently operated and maintained by Metro Parks Tacoma within Point Defiance Zoo and Park, Metro Parks will design and construct utility upgrades to meet Tacoma Power material, assembly/ construction, and operating standards with the understanding that Tacoma Power may in the future assume operation and maintain these facilities to what will become secondary/service metered locations.

L. TACOMA WATER: For utility systems currently operated and maintained by Metro Parks Tacoma within Point Defiance Park, Tacoma Water will design and Metro Parks will construct utility upgrades to meet Tacoma Water material, assembly/ construction, and operating standards with the understanding that Tacoma Water will in the future assume ownership, operate, and maintain these facilities up to and including the meter.

Tacoma Water agrees that project specific analysis can be reviewed on an Annual and/or 5-Year Programmatic Review schedule with Metro Parks Tacoma under the DRA and an administrative amendment process.

M. MODIFICATIONS: Modifications to this agreement must be applied for by written application to the PDS Director. Such modifications will only be approved if the PDS Director determines that they are within the scale and scope of the Master Plan and any project thereunder described in this Agreement and its attachments.

N. TERMINATION: This Agreement may be terminated at any time by either party upon 90 days written notice with or without cause.

O. MISCELLANEOUS PROVISIONS:
1. Dispute Resolution. In the event of a dispute between Metro Parks and the City arising out of or relating to this Agreement, the Metro Parks Executive Director and the City Manager and/or the TPU Director, or their designated representatives, shall review such dispute and options for resolution. If the dispute cannot be resolved by Metro Parks Executive Director and the City Manager, the dispute may be submitted to mediation, and if still not resolved, shall be submitted to binding arbitration in accordance with the rules and procedures set forth in chapter 7.04 RCW, and the judgment or award rendered by the arbitrator may be entered in any court having jurisdiction thereof.
2. **Hold Harmless/Indemnification.** Metro Parks agrees to indemnify, defend, save, and hold harmless the City, its officials, employees, volunteers, and agents from any and all liability, demands, claims, causes of action, suits, or judgments, including costs, attorney fees, and expenses incurred in connection therewith, of whatsoever kind or nature, arising out of, or in connection with, or incident to, the performance by Metro Parks of this Agreement, except for those damages caused by or arising out of the negligence, wrongful, or willful misconduct of the City, its elected and appointed officials, officers, employees, or agents.

The City agrees to indemnify, defend, save and hold harmless Metro Parks, its officials, employees, volunteers, and agents from any and all liability, demands, claims, causes of action, suits, or judgments, including costs, attorney fees, and expenses incurred in connection therewith, of whatsoever kind or nature, arising out of, or in connection with, or incident to, the performance by the City of this Agreement, except for those damages caused by or arising out of the negligence, wrongful, or willful misconduct of Metro Parks, its elected and appointed officials, officers, employees, or agents.

In the event of liability for damages of any nature whatsoever arising out of the performance of this Agreement by Metro Parks and the City, including claims by Metro Parks or the City's own officers, officials, employees, agents, volunteers, or third parties, caused by or resulting from the concurrent negligence of Metro Parks and the City, their officers, officials, employees, and volunteers, each party's liability hereunder shall only be to the extent of that party's negligence.

In the event of litigation between the parties to enforce rights under this section, reasonable attorney's fees and costs shall be allowed to the prevailing party.

3. **No Third Party Beneficiary.** Nothing in this Agreement shall be construed as creating any separate entity or joint venture between the Parties, nor shall anything in this Agreement be considered to create any third party beneficiary rights in any third party and is neither expressly nor impliedly enforceable by any third party.

4. **Notices.** All notices, demands, or requests which may or are required to be given by one party to the other under this Agreement shall be given in writing and hand delivered, or sent by United States registered or certified mail, postage prepaid, return receipt requested, and addressed to the appropriate party's address below. Notices shall be deemed to have been given upon receipt or attempted delivery when delivery is not accepted. Either party may change its address upon notice given to the other.

**Metro Parks:**

Metropolitan Park District of Tacoma  
Attn: Executive Director  
4702 South 19th Street  
Tacoma, WA 98405

**City:**

City of Tacoma  
Attn: City Manager  
747 Market Street, Rm. 1200  
Tacoma, WA 98402
5. **Enforcement, Interpretation, and Venue.** The laws of the state of Washington shall govern the validity, performance, interpretation, and enforcement of this Agreement. Should either party institute arbitration for enforcement or interpretation of any provision contained herein, the venue of such arbitration shall be in Pierce County, Washington.

The prevailing party in any arbitration or litigation arising out of this Agreement shall be entitled to reasonable attorney's fees, costs and expert witness fees.

The Parties agree that each of them were adequately represented by independent Council, and that both Parties shared equally in the drafting of this Agreement. Therefore, this Agreement shall not be construed either for or against the City or Metro Parks as drafter, but this Agreement shall be interpreted in accordance with the general tenor of the language in an effort to reach an equitable result.

6. **Integration and Amendment.** There are no oral agreements between the parties affecting the meaning, content, purpose, or effect of this Agreement. No additions to, or alterations of the terms of this Agreement shall be valid unless made in writing and formally approved and executed by the duly authorized agents of both parties.

7. **Invalid Provisions.** If any provision of this Agreement shall be held invalid, the remainder of the Agreement shall not be affected thereby, if such remainder would then continue to serve the purposes and objectives of the parties.

IN WITNESS WHEREOF, the parties have executed this Agreement as of the date first written above.

EXHIBIT “A”

Point Defiance Park - Legal Description

Government Lots 1, 2, and 3 of Section 10, and Government lots 1, 2, and 3 and the South one half of the Southwest Quarter of Section 14, and Government Lots 1, 2, 3, 4, 5, and 6 and the East one half of the Southeast Quarter, and the Northeast Quarter of the Northwest Quarter, and the Southwest Quarter of the Northeast Quarter of Section 15, all in Township 21 North, Range 02 East, W.M., in the State of Washington.

Together with a portion of Government Lot 1, Section 22, Township 21 North, Range 02 East, W.M. more particularly described as follows:

Commencing at a stone monument marking the Northeast corner of said Government Lot 1,

Thence westerly along the North line of said Government Lot 1, South 89°39'58"West, 17.00 feet to the true point of beginning;

Thence continuing along North line of Said Government Lot 1, South 89°39'58"West, 1762.99 feet;

Thence South 28°34'05"East, 317.88 feet;

Thence South 32°19'25"East, 82.30 feet;

Thence North 81°48'19"East, 222.00 feet;

Thence South 24°13'33"East, 217.95 feet;

Thence South 61°48'33"West, 247.00 feet;

Thence South 28°11'27"East, 17.25 feet;

Thence South 37°49'55"East, 167.97 feet;

Thence South 29°16'30"East, 243.25 feet;

Thence South 41°06'43"East, 132.07 feet;

Thence South 03°12'48"West, 147.54;

Thence South 06°29'32"East, 88.40 feet to a point on the South line of said Government Lot 1;

Thence easterly along said South line of said Government Lot 1, North 89°39'58"East, 1056.35 feet to a point which bears South 89°39'58"West, 117.00 feet from the Southeast corner of said Government Lot 1;
Thence northerly parallel to the East line of said Government Lot 1, North 00°01’11” East, 34.25 feet;

Thence easterly parallel to the South line of said Government Lot 1, North 89°39’58” East, 100.00 feet;

Thence northerly and parallel with the East line of said Government Lot 1, North 00°01’11” East, 1296.50 feet to the true point of beginning.

Also known as Parcel “A” of Record of Survey as recorded under Auditor File Number 8602050198, records of Pierce County Auditor.

Also together with the East 1100 feet of the North 330 feet of Government Lot 2, (said North 330 feet being measured along the East line of said Lot), Section 22, Township 21 North, Range 02 East, W.M. EXCEPT the following described property:

Beginning at the Northeast corner of Government Lot 2, of Section 22, Township 21 North, Range 02 East, W.M.;

Thence West 117 feet along the North line of said Lot 2;

Thence South 25.75 feet parallel with the East line of said Lot;

Thence East 67.70 feet parallel with the North line of said Lot;

Thence southeasterly 177 feet, more or less, to a point which is 202.31 feet South of said North line and 18.49 feet West of said East line;

Thence 18.49 feet East to the East line of said Lot;

Thence 202.31 feet North to the point of beginning

Also known as Parcel “C” of Record of Survey as recorded under Auditor File Number 8602050198, records of Pierce County Auditor.

Also together with that portion of the Northwest quarter of the Northeast quarter of Section 23, Township 21 North, Range 02 East, W.M. more particularly described as follows:

Lots 1 through 4 and the North 10 feet of Lot 5, Block 1, Rust Addition being the Second Replat of Hugh Glenn's Addition Pierce County, Washington as recorded in Volume 9 of Plats at Page 87, records of Pierce County Auditor

Also together with all of Block “A”, 1961 Supplemental Maps of Tacoma Tide Lands as filed on January 12, 1962 in the office of the Commissioner of Public Lands, Olympia, Washington

Lands situate in the County of Pierce, State of Washington

## Appendices to the Master Plan Update
- Appendix C: Existing Hydrology and Storm Drainage Requirements Report- BCIA, July 2015
- Appendix E: Point Defiance Park Program: Protecting and Enhancing the Visitor Experience - BCIA, November 2014
“Probably no other city in this country has such a beautiful natural park. Its setting, and relation to the city is unique and ideal. Surrounded on three sides by Puget Sound, and rising some three hundred feet above the tide level, it affords as beautiful views over land and water as can be seen in this or foreign lands.”

“Within the boundaries of the park are also many beautiful scenes: magnificent groups of trees, fine masses of shrubs, flowers, and ferns. Those groups along the drives have been seen and appreciated by many, but hundred, yes thousands, of such flower and fern masses lie hid in the almost tropical jungle of the wooded areas. The new paths and drives will open to the public many more beauties in this natural garden. It might be well to say here that strict rules, with zealous watching, will be necessary to prevent the ultimate destruction of these native plants by selfish or thoughtless persons. Every citizen of Tacoma should feel it a duty and privilege to become one of the guardians.”

“While the park will doubtless always be best known because of its beautiful natural scenery, the expanse and natural arrangement, together with the diverse inclinations of the public, justify the devoting of reasonable areas to other attractions. The whole park naturally falls into three general divisions, namely: (1), athletic field; (2), zoological garden with entrance and beach; (3), natural woodland.”

— Hare & Hare, Landscape Architects, 1911 Report to Board of Park Commissioners
EXECUTIVE SUMMARY

In 2005, Metro Parks Tacoma began a lengthy process to develop a new master plan for Point Defiance Park. Previously, the only master plan officially adopted by the Board of Park Commissioners was the Hare & Hare Plan in 1911. An extensive community involvement process undertaken in 2005 led to the development of the 2008 Concept Plan, which the Park Board adopted to serve as a set of guiding principles for future enhancements. The Concept Plan in turn became the starting point for this Master Plan Update.

In 2013, Metro Parks Tacoma conducted an internal exercise among various departments involved at Point Defiance. The intent of the exercise was to evaluate the current and future programs and facilities located within Point Defiance Park. The resulting Program Plan helped prioritize future planning efforts and became another element used to help inform this Master Plan Update.

In 2015, as Metro Parks undertook the next public engagement process, it became clear that the original vision of Hare & Hare still physically defines what we see at Point Defiance today and that the landscape architects’ formulation of the Park’s natural beauty and their tenets of preservation still resonate deeply with the community. We recognized that the current planning effort needed to be treated as an update to the 1911 plan that both honored the original vision for Point Defiance Park and maintained the value of what this Park has meant to Tacoma.

However, Hare & Hare could not have imagined that 100 years after laying out their plan, the Park would receive over 3 million visitors a year, nearly all of them by automobile. Recreational pursuits have changed, and parks and beauty pagesants have given way to sports and running events. How we use the Park today puts unique demands on the original design and uses. In addition, unforeseen environmental issues and new technologies all play a part in the challenges for the ongoing stewardship and management of this great natural resource. We recognize the long-lasting importance and impact that our efforts as a community on this updated plan will have on the future of the Park. Consistent with the Hare & Hare approach, this Master Plan Update continues the focus on the Park’s three major use areas: Forest, Waterfront, and Activity Area. As its guiding principle, the Update relies on the Mission and Objectives developed with the community for the 2008 Concept Plan.

MISSION:

OBJECTIVES:
- Preserve, protect, and enhance the integrity of the Park’s history and beauty
- Create an exceptional recreation environment
- Enhance the visitor experience through education, recreation, leisure, and safety
- Create a destination and gathering space
- Provide financially sustainable opportunities to enhance revenue for maintenance and operations
- Encourage water-related independent activities
- Complete missing link between Ruston Way and Point Defiance

PUBLIC OUTREACH

Early in the process it was recognized that significant public outreach would be necessary and that it would need to go beyond the traditional public meeting format. To that end, a communications plan was created to utilize the whole spectrum of public media, from a Web forum, Facebook, and Twitter to email blasts and print media outreach. All of these tools provided additional opportunities to survey the broader community and engage them in a dialogue over individual concerns. In addition, a series of public meetings systematically discussed key elements and proposals, be included in any new plan. In total, five meetings were held that covered themes of redefining the 2008 Concept Plan, discussing the Program Plan and related support facilities, parking, vehicular circulation and pedestrian and bicycle trails and enhancements. Preliminary plans were presented at two additional meetings, which provided opportunities for final adjustments prior to submission to the Board of Park Commissioners.

PLAN DETAILS

The public participation process helped identify seven primary Focus Areas: the forest, Tonic Beach, Fort Nisqually, bike trails, Camp 6, the Zoo, the Tide tance, and the Waterfront. Work also included a look at a number of key issues including traffic, pedestrian circulation, parking, public transportation, and utility infrastructure. In addition, a preliminary environmental scan was completed to assess potential impacts and development of strategies and mitigations to respond to identified issues relevant to critical areas from wetlands, to bluffs, and wildlife habitat, and the overall cultural and historical resources of the park. These scans were developed as part of the State Environmental Policy Act (SEPA) Checklist review process. Finally, a set of General Design Guidelines has been developed with the intent to protect the integrity of the Park’s arbor and aesthetics as new facilities are added.

The purpose of this planning process was to develop a broadlist of options and understanding of impacts and mitigation needs in order to best accommodate the future needs of the community, while balancing protection and access to the natural areas with providing a venue for community gathering and recreational use.

Activities planned for each focus area closely reflect the current intensity of activity and the natural divisions of the park. A spreadsheet of proposed project elements is included at the end of the document for easy reference. A number of improvements for each of the focus areas were refined from the public participation process that created the 2008 Concept Plan. These improvements include:

- Recreation
  - Tree perspectives
  - Pedestrian/bicycle trail enhancements
- Fort Nisqually
  - Native American plank house
  - Parking and roadway upgrades
- Fire station
  - Shelter restoration
Baker Tract/Camp 6
- Neophytic shelter
- New Environmental Learning Center
- Parking & restroom
- Recycled dog park
- Nature adventure play area
- Maintenance facilities

Owen Beach and Promenade
- Neophytic shelter
- Replace concessions and add new restrooms
- Kopak boat launch
- Parking lot upgrades

Point Defiance Zoo & Aquarium
- New Environmental Learning Center
- New Pacific Rim Aquarium
- Improved Rocky Shores and Polar Bear exhibits
- Parking expansion
- Additional storage and picnic facilities

Entrance/Canal Bowl
- Roundabout entry
- Newgardens and upgrades to existing gardens

Waterfront
- Marina upgrades
- Newboat trailer parking
- Bastion Way trail connector
- Event plaza
- Newpark amenities on the Peninsula
- Parkammity buildings

In addition, parkwide improvements include:

Parking
- Consolidation at existing parking areas
- Expansion of the Zoo lot with a deck alternative
- Expanded parking at the Triangle site

Pedestrian/Bicyclist
- Creation of new unshaded pathways from the entries to major destinations including the Zoo, Fort Nisqually, and Owen Beach
- Continued closure of the outer loop - vehicular traffic and pathway enhancements

Infrastructure Upgrades
- Bituminous improvements for safety and environmental improvements
- Railing upgrades and signage improvements
- Continued forest management

Thank you to everyone who has contributed to this effort, sharing your memories, thoughts and ideas. Your input has been vital to the creation of this updated vision for Point Defiance Park. We have been given a magnificent gift, not only with this Park but with the vision and care that brought it through the last 70 years. This plan is a start of moving the community and Point Defiance through the next century.

Sincerely,

Jack C. Wilson, Executive Director
Metro Parks Tacoma

ERIE
COMMUNITY INPUT

Metro Parks continues to be committed to an open public participation process and understands the importance of this in order to move forward with Destination Point Defiance. Since the adoption of the 2006 Concept Plan, Metro Parks has hosted numerous informational forums and made presentations throughout the community. It is the hope that the design for the Park could be viewed, within the planning of the 2014 Pan Improvement Bond, and a commitment for a new aquarium and other enhancements within the Park, it was time to reframe and advance the vision set in 2008.

STEERING COMMITTEE

A Steering Committee, formed in January 2015, was made up of citizens representing groups or organizations including, The Zoo Society, Tacoma Waterways, the City of Tacoma, and others. The committee’s purpose was to serve as a sounding board for planners and provide an ongoing source of input.

PUBLIC MEETINGS

The 2015 meetings were a valuable source of public input and dialogue. Surveys were distributed in these meetings and served as an additional source of public input.

January 28 - Project overview: Zoo projects and Waterfront Phase I

This public meeting was an introduction to the process. Beginning in 2005, Metro Parks spent several years performing public outreach that culminated in the 2008 Concept Plan. This presentation was the starting point for the new public process to review the findings from 2006 and move forward. Additionally, Metro Parks’ staff went through a internal process resulting in the Destination Point Defiance Program Plan. The Program Plan was a more detailed look at improvements suggested through the Concept Plan as to how they could be advanced to provide a greater service, recreation programs, and educational opportunities. At this first public meeting the ongoing work and the need for a more effective City process was discussed, as well as an overview of what the next few months would bring.

Breakout sessions were held for projects that were moving ahead of the Master Plan so the public would be informed of that work. Consultants for the Point Defiance Zoo & Aquarium presented an overview of plans for the new aquarium and the joint education building, both of which lie within the former line of the zoo. Consultants for the Waterfront Phase I project presented ongoing work at the Triangle addressing stream restoration and development of a new trail and pedestrian bridge.

February 26 - Program and Support Facilities

Based on feedback from the first meeting, specific programs and support facility options were presented for discussion. This included an overall assessment of the Park into 3 zones of intensity, from the most active zone at the entrance of the Park, a central active area, and the least active area being the forest. Development planned in each area corresponds to the level of intensity consistent with the Park Mission and Objectives, to maintain the character of the Park and move toward a pedestrian-focused environment.

One outcome of this meeting resulted in shifting a proposed nature play area out of all of the areas of the Forest Zone to align more with proposed education and active uses in the former Camp 6 / Baker Tract area.

March 24 - Circulation: pedestrian, bike, auto, shuttle, and parking

This meeting discussed existing circulation and parking issues, and anticipated growth and impacts. Key elements included suggestions for intensifying traffic, increasing parking near the key use areas, and creating an unshared pedestrian / bicycle path throughout the Park.

April 23 - Master Plan presentation

For this meeting, all previous work was combined along with public comments and suggestions as appropriate into a draft Master Plan Update. Additional issues, most notably the entrance roundabout and roadway directives, were discussed and reps was selected.

May 28 - Open House

This open house gave the public final opportunity to review and make comments on the completed Master Plan Update prior to submission to the Park Commissioners for further review and consideration for adoption. Opportunity was also provided to once again see plans for the new Aquarium, Joint Education Building, Waterfront Phase I, and other current activities within the Park.
PUBLIC REVIEW PROCESS

COMMUNICATIONS PLAN - WEBSITE/BLOG

Metro Parks Communications staff and planners began with the premise that not everyone in the district could attend a public meeting. In addition to helping traditional media cover the master plan process, Metro Parks set out to use its own tools to disseminate information and develop two-way communication with the public:

Metro Parks’ staff distributed posters and information cards about the process to community centers, libraries, and county offices, and to Metro Parks’ community liaisons, who spoke directly to people in specific organizations. Local news media also gave the process exposure. To promote a conversation beyond the public meeting format, staff used multiple tools:

Web
- The tagline “Destination Point Defiance” had been used in earlier marketing tools and it was decided to continue to market under that heading for ongoing outreach. Staff built the DestinationPointDefiance.org URL as a go-to source of information about the project. Content increased throughout the process, and by May the site included a calendar of public meetings and other events, a link to an online forum for community discussion, PDF files of public meeting presentations and information about the Development Regulation Agreement (DRA), Destination Point Defiance and the 2006 Concept Plan, information about each of the major elements of Destination Point Defiance, such as the Master Plan and Waterfront Phase I, and compilations of public comments.

Print materials: cards, posters, fliers ...
- Metro Parks began using Minilines, now called MySidewalk, as an online forum for people to discuss proposals and give input.

Draftee/community
- Jon and others: Metro Parks staff invited members of some groups to join the steering committee, they encouraged representatives of other groups to participate in the general public meetings and the rest of the process. The first round of invitations went to groups with close ties to the park such as Fort Nisqually volunteers, Tacoma Youth Clubs and Tacoma Public Schools. The second round extended the outreach to organizations with broader ties, like the Tacoma Urban League AMSTES, and the Korean Women’s Association. Community liaisons were kept up to date on the process and supplied with evaluation cards, fliers, maps, and other printouts to take to their groups.

Facebook and Twitter
- To support Point Defiance Park, Metro Parks staff created a dedicated Facebook page in late 2014 and set a goal of 1,000 likes by March 1. The goal was met early and May the number of fans exceeded 2,500. Staff used the Point Defiance Park and Metro Parks Tacoma Facebook pages, and the Metro Parks Twitter account, to announce meetings, send meeting reminders, and give updates on the process, with nearly all posts linking to the DestinationPointDefiance.org website. Past social media advertising extended the reach to many in Metro Parks’ social media target audience. Social media also served as a source of public input about the process, and comments were pulled into workshops for BORA.

Email blasts
- Thermochro, a Metro Parks Today e-newsletter featured the master plan process from January through May. Visitors to DestinationPointDefiance.org also were able to sign up for email updates on the process.

PUBLIC COMMENT LETTERS

Draft Copies of the Master Plan Update were posted on-site Parks Tacoma’s “Destination Point Defiance” website and several comment letters were received from various groups, public agencies and individuals including: The City of Tacoma’s Bicycle and Pedestrian Technical Advisory Group (BPTAG), West End Community Council and other interested individuals. Most comments and suggestions from these letters were responded to and were incorporated into the master planning process as deemed appropriate.
ENVIRONMENTAL CONSIDERATIONS

MAPPED CRITICAL AREAS AND PRIORITY HABITAT AND SPECIES – GRETTE ASSOCIATES

Early in the master planning process, Grette Associates was engaged to conduct a review of existing databases to determine natural resource constraints. These included Priority Habitats and Species, the National Wetland Inventory, U.S. Fish and Wildlife Service data points, and local spatial information. Field investigations were conducted in areas generally believed to be proposed for future work according to current planning scope. The purpose was to verify the presence of natural resources and critical areas, document their conditions, and identify any undocumented areas. The results of the data review and field investigations were evaluated with respect to Tacoma’s Critical Areas Protection Ordinance (TMC 13.11) and Shoreline Master Plan (TMC 13.10).

The resulting document confirmed the presence of several wetlands and identified two new possible wetland features. Stream locations were verified, as well as the locations of geologically hazardous areas (deep slopes). Development constraints, including buffers and setbacks, were identified. The presence or absence of bald eagle nests was also documented. The entire area is mapped as a biological diversity area and corridor for terrestrial species. There are no development constraints associated with those specific designations.

TRAFFIC / PARKING / CIRCULATION – TILGHMAN GROUP

The Tilghman Group was hired to prepare a Transportation Analysis for the Development Regulation Agreement at Point Defiance Park. Their report describes existing transportation systems, identifies seasonal and daily variation in the Park’s traffic and parking demands, forecasts increases in traffic and parking based on the proposed improvements, and evaluates future traffic operations. The report also recommends actions to improve pedestrian and bicycle circulation, traffic operations, and parking throughout Point Defiance Park. The Transportation Analysis is in the Master Plan was prepared in close coordination with City of Tacoma Public Works Staff.

As part of the Master Plan and Development Regulation Agreement with the City of Tacoma, Metro Parks has proposed a variety of required functions and new uses within the park. The Tilghman Transportation Analysis summarized these development changes in three phases, at five-year intervals.

In order to support the proposed changes and improvements with appropriate access and parking, and to improve walking and bicycling in the park, the following transitions related to transportation and circulation are being evaluated in the Master Plan:

- Construct a new traffic roundabout at the Pearl Street entry
- Construct the internal road from the Zoo to Pearl Street to two-way flow and connect two-way operation past the Zoo and Fort Nisqually
- Realocate the lane now used for access to the boat ramp for use as a holding lane for the ferry

New improvements were also reviewed with regards to pedestrian and bicycle access through Point Defiance Park. They include:

- Creating a protected shared-use pathway extending and widening the existing path from the newly proposed bridge across the waterfront access roads; Owen Beach
- Creating a new walking path from the Pearl Street entrance to the Zoo and beyond to the former Camp 6 area and Fort Nisqually

Bicycle and pedestrian circulation, access and safety were analyzed at the master plan level and for this project. Future planning efforts for the following areas within the park will include detailed discussions and further analysis to take an in-depth look at pedestrian and bicycle access, circulation, and safety.

Parking in the Park was analyzed as well as the following improvements were proposed:

- Deck apportion of the Zoo to create additional parking spaces to meet the Zoo’s design day needs
- Provide parking at the Triangle to meet its future needs (approximately 450 spaces)
- Provide new boat trailer parking to consolidate and formalize parking for boat trailers (construction began, July 2010)
- Expand parking at Owen Beach by using the area located at the top of the existing lot to meet demand on busy days. Approximately 60 new spaces could be added
- Add permanent parking to the former Camp 6 site to support its uses, 120 stalls are proposed
- Create a limited amount of parking at key trailheads on five-mile Drive
- No tri-axle vehicle parking lots throughout the park where feasible to increase efficiency

The Tilghman analysis of the proposed improvements at Point Defiance Park identify several transportation-related impacts resulting from the proposed future improvements. These identified impacts are experienced mostly during busy summer weekends and include:

- Increased congestion at the intersection of N. Pearl Street and N. 51st Street on summer Saturdays
- Potential parking shortages along the waterfront and at Owen Beach

Recommended mitigation measures to address these impacts were identified in the Tilghman report.

Bicycle and pedestrian safety is an important aspect of the Point Defiance Park Master Plan Update, especially in those areas of the park where they interact with vehicles. A thorough technical analysis and further design work will be needed to ensure the safe integration of pedestrians, bicycle and vehicle circulation. As the new facilities programs and other physical improvements identified in the Master Plan Update are implemented across the park, future planning and design efforts will include detailed analysis of vehicles, pedestrians and bike/ped cycle circulation, bicycle parking, access and safety issues. The City of Tacoma Bicycle and Pedestrian Technical Advisory Group, Tacoma Wheelmen, other formalized bicycle advocacy groups and, the general public will be invited to help inform future planning efforts related to future capital and infrastructure improvements to Point Defiance Park.
CULTURAL AND HISTORIC RESOURCES – ARTIFACTS CONSULTING, INC.

The purpose of the Historic Property Management Plan (HPMP) is to provide information on the historic building structures, objects, circulation networks, archaeology, traditional cultural properties, and landscapes within the Park. The HPMP provides the background to determine local, state, and federal regulatory compliance, guide treatment of the identified historic properties, and inform education and interpretive opportunities.

The HPMP provides a tool to make the following goals, articulated in many of the recent Metro Parks Tacoma planning documents, more accessible:

- Support and expand the Historic and Cultural Assets Inventory
- Guide and prioritize treatment of historic properties
- Provide guidance on property and cultural landscape stewardship
- Provide guidance on regulatory compliance
- Support education and interpretation goals of park programming

The park may be eligible for listing in the National Register of Historic Places (NRHP) and Washington Heritage Register (WHR) as a district at the local level of significance under criteria A, C, and D. The park also may be eligible for listing in the Tacoma Register of Historic Places (TRHP).

There are currently 34 listed built environment properties within the Park: the Point Defiance Streetcar Station (Baggott), Fort Nisqually Granary and Factor’s House, and the Fort Nisqually Restoration.

Other historical features, such as the ruins of the old bear pit in the Bowl, will be evaluated and further documented if future projects or programs identified in this Master Plan Update are to occur in the vicinity of these features.

STORMWATER – JCKS ENGINEERING

A stormwater report was prepared providing information related to the existing storm drainage basins within Point Defiance Park and identified storm drainage mitigation that will be required as development occurs within the Park in accordance with the Point Defiance Park Master Plan Update.

The site has approximately 19 separate storm discharge areas (storm drainage basin) which drain directly to Puget Sound either through an outfall, ditch, or overflown flow, and each was analyzed in the report for existing land use, storm drainage systems and patterns, and proposed improvements.

The following is a list of minimum requirements to be reviewed with future development projects:

- A Stormwater site plan will be prepared for individual projects within the Park as they are developed. The report provides information related to the existing conditions within the storm drainage basins on the site.
- A Construction Stormwater Pollution Prevent ion Plan (NSWPP) will be prepared for individual projects.
- Source control Best Management Practices (BMPs) will be selected and designed for individual projects.
- Dewatering areas where continuing the current drainage patterns will result in further accelerating bluff erosion, natural drainage patterns and discharge locations will be maintained. Where maintaining current discharge locations will likely result in further bluff erosion, stormwater from developed projects, and as part of a conservation project, will be directed to a piping conveyance system or fully dispersed in native vegetation.
- Site feasible, roof runoff treatment, bioretention, Sediment and Flow Quality BMPs, and Tree Retention and Transplanting BMPs will be selected and designed for individual projects.

Projects within the Park that exceed the current thresholds for water quality treatment in Section 3.6.6.1 of the Washington State Stormwater Management Manual (SAWM 2013) will provide water quality treatment for all pollution-generating surfaces.

If individual projects within the Park propose to discharge to a wetland, they will be required to comply with the Wetland Protection requirements in the SAWM.

MASTER PLAN FOCUS AREAS

The next two pages have graphics of the overall site with a key map that locates each of the Master Plan seven focus areas. The pages following these cover each focus area and include an enlarged graphic with the key elements located, a paragraph or two summary of the area, and then more detailed information about each proposed element.

Each focus area will continue to be programmed in more detail and will have ongoing public outreach as plans are refined prior to final implementation. As each area plan is developed more fully, they will be added to this Master Plan as appendices to the document.
FOREST AREA

Point Defiance Park is unique among urban parks because of its old-growth forest and location on a peninsular surrounded on three sides by Puget Sound. Most of the park sits high above the water, with dramatic views and steep cliffs that drop down to a narrow beach. The 566-acre Point Defiance Park includes approximately 510 acres of old-growth, which is a valuable asset to the citizens of Tacoma and the region, both for the ecosystem services and the recreational and educational opportunities.

This area of the Park needs to be managed to protect this valuable resource. The protection of the fragile bluff edge and the ecosystem must take precedence over the human element. It requires a careful balance to manage this part of the Park while maintaining the existing level of use.

All of the viewpoints and some of the roadways abutting the bluff edges need serious work in the future to relieve pressure on and stabilize the edges. Limiting vehicular access to these edges is critical, so pull-offs will be modified to remove parking further off the edges. This will be a continuing work effort through the course of the Master Plan and on through the Park’s future. Five Mile Drive will continue to have periods of closure to cars, allowing pedestrians and bicyclists to use the road without conflicts. Increasing the closure times and adding a shuttle service during high-season use times is desirable in order to aid in decreasing vehicular traffic, yet enable access for those who need transport.

Work in this area will be managed under the Forest Stewardship Plan created by Metro Parks in 2010.

LEGEND

- One-way Vehicular Circulation
- Close off or Modify
- Pedestrian Circulation

1. Relocate Five Mile Drive to Protect Bluff
2. Becomes Pull-off Parking (No Through-access)
3. Restore WPA Picnic Shelters and Replace Restroom
4. Trail Enhancement for Pedestrian and Educational Opportunities, Construction of New Trailheads
**MASTER PLAN FOCUS AREAS**

**Rexton WPA Picnic Shelter and Replace Restrooms**
Currently, the only structures within the Forest Zone are the WPA shelter and the Rexton building at the Gil Harbor Viewpoint. The WPA shelter is in need of restoration work that is planned to be completed by 2018. The Rexton building will be replaced with a new structure of comparable size.

**Relocate Road Away From Unstable Bluffs in Multiple Locations: Stabilize Bluff Edge Where Possible: Improve and Enhance the Viewpoints**
Work on deteriorating road and bluffs conditions will be a maintenance priority over the next five years. Viewports are being analyzed for safety issues and enhancements. Parking areas may be relocated to the opposite side of roadways to minimize possible impacts on the bluffs and provide better view visibility. Replacement of chain-link fencing with other types of fences will improve visual compatibility while still enforcing safety landscaping will be maintained to stabilize slopes while keeping views clear.

**Provide Parking for 15-20 Cars in Area of Five Mile Drive Close-off**
The desire to explore the farther reaches of the park on foot or bicycle has resulted in the random parking of vehicles along the roadway edges. In order to protect and manage the edges of the forested areas, closing off a small, undivided section of the roadway beginning at the beginning of the Five Mile Drive loop has been proposed. This area can be used to park for those who want to continue on foot or bicycle through ‘Five Mile Drive’.

**Trail Enhancements for Pedestrian and Educational Opportunities: Construction of New Trailheads**
Ongoing maintenance of trails is a necessity for the positive performance of any park. Over time some trails have become unsafe due to proximity of steep slopes, or are impacting critical areas such as wetlands, or are simply unsanctioned. These trailhead dedicated focus to return them to a stable wooded environment.

More of the visitors to the Park are missing out on the wealth of knowledge that exists about the Forest through the lack of interpretive signage available. A comprehensive signage plan will be designed that will not only give trail guidance but will also provide educational and historical information. The use of technology, such as mobile phone applications, can be included in this plan to supplement the information that can be accessed.

**Forest Stewardship Plan**
Protecting the natural forest processes for public recreation and education is the primary long-term goal of the management of the forest zone.

Two areas in the western part of the forest Zone have been designated as Washington Natural Heritage sites, and recognized as the Narrows Bluff Madrona Forest. The primary significant natural feature is the occurrence of a very rare type of oil growth Douglas fir dominates forest: the Douglas fir/Pacific madrona/mountain huckleberry plant association.

Generally, tree pruning is necessary along designated trails, roadways and in picnic areas. Outside of trails, roads and developed areas, tree pruning should not be performed unless the crew being removed poses a hazard or the pruning is recommended as part of a fire or pest control plan. Any plant cutting or removal will follow the standards defined within the Forest Stewardship Plan.

**Environment and Mitigation Aspects**
- Forest and steep slope management
- Restoration of historic WPA structure
- Decrease of impacts in critical areas
- Decrease vehicular impacts on forest
- Traffic revisions and dedicated parking
- Stormwater management
FORT NISQUALLY

The Fort was brought to the Park from Dupont, WA in the 1930s and is a reconstruction of its original layout, containing two of the original Hudson Bay Fort buildings. A more detailed program plan for the Fort Nisqually focus area will be one of the first efforts undertaken in accordance with the adopted Master Plan.

Another element of historical significance was the existence of a camp for the Civilian Conservation Corps that was in the vicinity of the current off-leash dog park. Interpretive signage may be developed to recognize this piece of history.

There is an active bald eagle nest to the west of the Fort that will require proposed programs or construction activity to be reviewed under the National Bald Eagle Management Guidelines. Although bald eagles are no longer listed as a federally endangered or state threatened species, proposed development within 660 feet of a nest may require a management plan and adaptive management strategies.

LEGEND

- One-way Vehicular Circulation
- Two-way Vehicular Circulation
- Pedestrian Circulation

1. Rework Existing Parking Lot
2. New Native American Park House
3. Eliminate Parking along Five Mile Drive (Bluff Side)
4. Replace / Relocate Restroom Facility
5. Restore WPA Picnic Shelter
6. Fort Nisqually Master Plan
**MASTER PLAN FOCUS AREAS**

- **Internal to Fort - Renovate Kitchen and Clerk’s House and Others**
  - Renovations and maintenance of existing buildings will be ongoing. At this time, the Clerk’s House is in need of replacement, the kitchen should be reconstructed to more historically correct, the Sales Shop may need significant repairs, the Tea House may be reconstructed, and the existing structure between the Blacksmith Shop and Clerk’s House may be reconstructed. This is all part of the next phase.

- **Native American Interpretive Center – Plank House**
  - Including more historic elements that feature Native American culture is a Park goal, and will be explored through the development of a Plank House, in Long, House, and programs that will be managed through this new facility. The location of this structure is proposed to be adjacent to the main parking lot, within the area that nominally held the Never Never Lane amusement park.

- **Expansion of Agricultural Activity - Native Plants and Heritage Trees**
  - The area to the north of the Fort is planned to be utilized for these activities and will include the plantings and study of historic plants and agriculture.

- **Restore WPA Picnic Shelter; Replace and Relocate Restroom Building: Add Service and Storage Functions**
  - The WPA shelter is in need of restoration work. The restroom building will be replaced with a new structure of a slightly larger size to include service and storage functions, relocated farther away from the Fort and closer to the existing parking area.

- **Reverse Driving Direction of Loop Road around Fort: Eliminate Parking along bluff; Modify Existing Parking Areas to Improve Efficiency**
  - Revering the roadway direction around the Fort’s sand consideration as part of the overall automobile circulation plan. It will allow for more direct access from the entrance of the park to the Portland and other park destinations. This would also allow for a logical approach and drop-off area at the front of the Fort and then continuing to the main parking lot. Improved signage along the Mile Drive will be included as a tool to direct visitors to the facility.
  - Parking will be removed from the bluff edge through the park bluff stabilization effort. Replacement of chain link fencing with other types of fences will improve visual compatibility while enforcing safety. Landscaping will be maintained to stabilize slopes and keep views clear. The main parking area will be analyzed and re-studied, with minor modifications to edges, resulting in increased efficiency.

- **Master Plan of Fort Nisqually**
  - Design development for a master plan of Fort Nisqually is in process and the proposed traffic modifications and other prospective projects will be subject to detailed analysis and discussed through a public forum.

- **Environment and Mitigation Aspects**
  - Forest and slope slope management
  - Decrease of critical area impacts
  - Bald Eagle habitat management
  - Incorporation of additional element to Historic Museum
  - Preservation of historic park element
  - Restoration of Historic WPA structure
  - Traffic revisions and dedicated parking
  - Stormwater management
FORMER CAMP 6 / BAKER TRACT

The Logging Museum that was called Camp 6 was added as a privately operated exhibit in 1954 and removed in 2011 as interest waned. The area has been maintained as a gravel lot used for backup parking, most notably for large zoo events such as Zoolights.

This area will be planned to serve as an Environmental Learning Center. Buildings constructed at Camp 6 will be designed to be multiuse so they can serve varied park programs and events. This may include nature camps, retreat facilities, and other park-related uses.

The former Camp 6, along with the Baker Tract to the south, is seen as the best option for providing additional educational and low-impact nature-based recreational activities. This reasoning is partly based on the earlier use of the site as a Logging Museum, and the relatively young forest in this area in relation to the old-growth forest to the north. In 1902, a fire on the west side of Tacoma consumed 600 acres of trees, including 50 acres within the park. Subsequent logging cleared most of the Baker Tract and the Camp 6 area in the early 1930’s. This cleared area extended as far as the area when Fort Nisqually was reconstructed.

The secondary entrance to Point Defiance Park occurs at the southern edge of the former Camp 6 site and will likely see some increase in use as park road systems are revised to provide two-way access between the two park entrances and the main destinations of the park. Encouraging the development of low-impact activities in this area is consistent with the approach of keeping the development compatible with the natural character of the park.

FORMER CAMP 6
Multiuse/Environmental Learning Center with Assembly Spaces, Storage, and a Kiosk. Retain Existing Multiple Buildings: Totaling 20,000 SF
These facilities are proposed to be built over the course of several years. They will host a number of programs and be notably education- and nature-based.

Outdoor Educational Venue with Seating for 100
This seating area, intended for informal or formal outdoor presentations, would likely be placed in conjunction with a picnic shelter and restrooms at the north end of the Baker Tract, and includes support parking.

Support Parking for 125
Support parking areas should be located in close proximity to planned program areas. Reconfiguration and new uses will result in a reduction from the current 200 spaces within the existing Camp 6 gravel lot.

Environment and Mitigation Aspects
- Forest management
- Decrease of impacts to critical areas such as wetlands
- Traffic revisions and dedicated parking
- Stormwater management

BAKER TRACT
The Baker Tract consists of 46 acres acquired by Metro Parks in 1975. There is a gravel road east-west that physically separates this area from the rest of the park. Additionally, a portion of the east-tract that was used as a borrow pit has become a problem due to collecting storm drainage runoff and is noted in the Ensite Technical Memorandum as a possible wetland. The forest in the area contains mostly growth that originated subsequent to being cleared in the early 1930s, with some older trees remaining along the bluff edge overlooking the Salmon Beach Historic Community. There are two sawed roads cutting through the tract that give access to Salmon Beach.

The recommended boundary for the potential National Register of Historic Places district includes these properties at or contributed to the park's areas of significance and were developed within the period of significance, from 1888 to 1941. While this doesn't include the Baker Tract, it is noted that the Olmsted Brothers drafted a Preliminary Plan for the Tract to develop a single-family subdivision in 1915, which was never undertaken.

Nisqually Play Area for Active-Recreational Opportunities
This is a wooded area within the Baker Tract, potentially extending up into Camp 6, will be utilized for nature-themed programs and activities. These are intended for low-impact use that can occur within the trees and trails as they currently exist. Possible elements include a playground area, ropes course, climbing structures, and other similar activities. Minor modifications may be made if the intended activity is deemed appropriate for this location.

Relocate Off-leash Dog Park
The location of the off-leash dog park had been actively discussed with issues regarding nearby development of the park and dog owners who don't follow the leash rules. The general consensus is to move the dog park far enough away from Fort Nisqually and the Salmon Beach community to decrease the impacts from noise, acres, and parking. Ideally, dog owners should be able to directly access the dog park from Milford Street. This would provide access to multiple dogs in areas that are off-limits.

Shelved with Running Water
At most, two new support shelters for the relocated dog park and nature adventure recreational opportunities will be located in this area. A shelter at the dog park would be relatively small in size, as it would provide cover and running water. These shelters should be located in reasonable proximity to new dedicated parking areas and for efficiency/availability of water or other utility services.

Support Parking
Small support parking area should be located near to planned program areas such as shelters, the dog park, and nature recreation zones. Access to these areas should be directly from Milford Street if possible.

Park Maintenance Facilities, including Maintenance Office, Shop Buildings, Container Storage, Open Covered Storage, Parking, and Material Stockpiling
As 17 Triangle is being cleared for upcoming work, a new location needs to be found for maintenance facilities. Expansion of the existing stockpiling area at the entrance to South Salmon Beach Drive is a logical choice to consolidate functions. This would essentially double the area currently occupied by storage and accommodate new buildings, additional stockpiling, and parking areas. Additional screening will be placed for visual aesthetics along the side of the roadway.

Environment and Mitigation Aspects
- Forest trail management and steep slope critical areas
- Dedicated parking
- Wetlands and stormwater management
OWEN BEACH AND PROMENADE

Owen Beach, originally called Picnic Beach, has been a feature of Point Defiance Park almost since the Park’s inception. As roads were built near the end of the 19th century, the beach became more accessible and is still one of the major Park destinations. Some structures exist at Owen Beach: a concessions building, restroom building, and picnic shelter. All of these are in need of repair or replacement. Capacity at Owen Beach is generally dependent on the ability to park nearby. A shuttle service to the beach may be viable for high seasonal usage and will be reviewed for inclusion in the early part of Master Planning of the Beach.

The promenade connecting Owen Beach to the waterfront further southeast has been improved over time and provides an easy and well-used pedestrian and bike path.

**LEGEND**

- One-way Vehicular Circulation
- Two-way Vehicular Circulation
- Pedestrian Circulation

1. Add 2nd Picnic Shelter
2. Remove existing Restroom Building
3. Replace Existing Concession with Larger Building Including Restrooms
4. Improved Launching Ramp for Human-powered Watercraft
5. Restripe and Improve Existing Parking
6. Provide Area for Overflow Parking
7. Pedestrian / Bicycle Use of Existing Berry Road
8. Two-way Vehicle Entry from Five Mile Drive Into Parking

NORTH
Replace Existing Restrooms and Concession Building

These existing buildings are nearing the end of their useful life. The plan is to combine these uses in one structure and potentially add some additional building area for a multispace purpose.

Add Second Picnic Shelter

An additional picnic shelter will open up the possibility for simultaneous functions. This will require management of attendance numbers by staff to not overburden parking or picnic tables.

Expand Human-Powered Boating Availability, Improve Human-Powered Boat Launch Area, and Provide ADA Access to beach

The existing ramp is in need of improvements. At the same time, this area could be used to provide ADA access to the beach.

Impave Parking Efficiency and Add Overflow Area at Top of Lot

Macpherson area will be paved and re-striped to increase efficiency with minor modifications to edges to accomplish this. At the top of the parking lot there is a gravel/earthen area that is occasionally used for overflow parking. This area will be improved for more dedicated parking to be used by both Owen Beach visitors and during Five Mile Drive closures for pedestrian and bicycle use.

Additionally, the main entry drive to Owen Beach may be converted to pedestrian and bike access only, with the exit converted to a one-way drive. The main entry drive’s conditions of deep slopes that could be improved through the removal of curbs and pedestrian benefits from having a safe access to the beach.

Environment and Mitigation Aspects

- Shoreline permits required
- Providing ADA
- Forest and trail management
- Stormwater management
- Traffic revisions and dedicated parking
POINT DEFIANCE ZOO & AQUARIUM

The next three focus areas encompass the Activity Area of the park which is approached from the Main entrance on Pearl Street. This area brings the greatest amount of traffic, both vehicular and pedestrian, and connects to all major destinations. The activities planned for this area are in keeping with the traditional historic elements that developed at the beginning of the 20th century and as formally documented in the Hare & Hare Plan of 1911.

With the Hare & Hare Plan came a shift that moved existing zoo features, such as the buffalo pens, from the Bowl Area and consolidated them in the Zoo's current location. The aquarium, originally located at the waterfront, shifted up the hill in 1963 when a new state-of-the-art aquarium was built.

**LEGEND**

- One-way Vehicular Circulation
- Two-way Vehicular Circulation
- Pedestrian Circulation

1. Environmental Learning Center
2. Pedestrian Bridge From New Environmental Learning Center to Trails
3. New Aquarium
4. Convert existing Aquarium to South American Exhibit
5. New/Improved Arctic Tundra Exhibit
6. Improved Rocky Shores Exhibit
7. Parking Deck Over Existing to Add 465 Cars
8. New Storage Building
9. New Russian Far East Exhibit
10. New Australia Exhibit
11. New Picnic Shelter
POINT DEFiance ZOO & AQUARiUM

Nowave accredited zoological facility, Point Defiance Zoo & Aquarium (PDZ&A) is continually improving services, expanding facilities, and adding new exhibits. Limited parking at the Zoo entrance requires off-site parking with shuttle service during high attendance times such as Zoofights. With the construction of the new aquarium, planned to open in 2018, additional parking within their current lot is a priority.

New Aquarium Building

The Zoo’s 55-year-old North Pacific Aquarium is failing, weakened by decades of salt-water corrosion, and its life support systems are increasingly fragile. A new Pacific Rim Aquarium will continue the long-standing tradition of highlighting Puget Sound marine life while also showcasing some species new to the aquarium. The new aquarium will be completed in 2018 and will sit at between Kidd Wonders and Rocky Shores. This structure is one of only a few in the Master Plan that may be over 35’ in height to accommodate the program design.

Expand and Refurbish Arctic Tundra (Polar Bear) Exhibit and Renovate Rocky Shores Exhibit

The polar bear exhibit will be renovated to meet recent international standards and expanded with the goal of acquiring additional polar bears in the future. The three decades-old Rocky Shores exhibit is showing signs of deterioration, age and heavy use. Renovations to Rocky Shores – home to walruses, sea otters, seals, and penguins – will improve health and safety for animals and keepers. Upgrades to animal life-support systems and expanded animal viewing opportunities also will be included in the project. This work will include some new structure spaces, eating areas, and updated exhibits. THESE EXHIBITS ARE DEPENDENT ON THE EXISTING SYSTEMS. MODIFICATIONS TO THESE SYSTEMS WILL INCLUDE NEW LINES AND EQUIPMENT AND OVERALL IMPROVEMENTS TO THE WAY THE EXHIBITS ARE HANDLED.

Repurpose Existing Aquarium to Become a South American Exhibit, Including Additional Outdoor Exhibit Space

After the transfer to the new facility, this building will be re-purposed and updated for various new exhibits. This work includes removal of outdated seawater systems that will improve environmental conditions.

Enviromental Learning Center

This new structure will replace outdated buildings and house multiple education programs. This building will support youth and adult education programs, house zoo education programs and staff offices, and other administrative uses. There will be a pedestrian link from the second level across the adjacent roadway and into the woods, connecting participants and staff with the forest resources.

New Picnic Shelter

A new picnic shelter is proposed to replace the temporary tents that are now located within the Zoo grounds.

Storage Building

A new storage building will be built at the Zoo’s current maintenance facility adjacent to the main parking area.

Ado Parking / Deck Level ‘n’ Additional Cars

A partial second level deck will be added in the center of the existing zoo parking lot. The deck will be designed to work with the topography to look into the slope and minimize the visual impact. Trees will be planted within the lower level landscaped strips to provide additional visual enhancement. This construction is needed to support the attendance that the new aquarium will bring. Ideally, the creation of the two-way access roads between the Pearl Street entrance and the Zoo would be completed within a year of this timing. This central parking will alleviate the need for Fort Nisqually, Camp fl, as well as a staging area for walks and general Park use.

Russian Far East Exhibit

This new exhibit is proposed for completion in 2014.

Australia Exhibit

This new exhibit is proposed for completion in 2016.

Environment and Mitigation Aspects

- Forest management with the addition of replacement trees
- Improvements to seaway systems and fish habitat
- Addition of trees to internal lot landscaping
- Traffic revisions and additional parking within Zoo main lot
- Management of parking through shared use concepts
- Possible installation of wetlands across roadway
- Stormwater management
ENTRANCE AND BOWL

As the entrance to the most active area of the park, creating efficiencies of movement and reducing the number of automobiles through the bowl is of utmost importance. The confusion of roadway intersections at the main entrance will be improved with a roundabout that more clearly defines the purpose of each road. Revising roadways and other visual cues will enable drivers to efficiently move through the intersection and reach their destinations while increasing the safety of pedestrians and bicyclists.

A new Visitor’s Center will have either a prominently visible location near the Pearl Street entrance roundabout, or clear directional signage to its location.
New Roundabout at Entrance; Relocate Parking Around Loop to be on Bowl Sides’ Drive

This is the main entrance to the Park, and so such the design and layout must be reflective of the Park character. This design needs to include current thinking on roadway directions through the park, and include changes for two-way access to the Zoo. Significant trees in this area must be acknowledged and accommodated to the greatest practical extent.

An option to reverse the direction of traffic: around the bowl will be considered in future planning efforts as it would more-safely accommodate the flow from the roundabout to the two-way roadway in the Zoo. It would have the added benefit of providing a flow to the Park that visually connects the visitor to whose they want to go. If the direction is changed, roadside parking should be shifted, to the right side (bowl side) of the road for pedestrian safety. Continuing analysis is on roadway system changes in the bowl will be reviewed in conjunction with the roundabout design, taking the historic relevance of circulation as a factor when weighing the considerations.

Keeper’s Lodge

The Keeper’s Lodge is one of the remaining original structures at the Park, built in 1888, as a residence for the Park’s first superintendent. More recently it has housed the Vistor Center and staff offices, with some storage in the basement. If the Visitor Center is moved to a more mid-pasture nearer to the entrance to the Park, this building should be preserved and re-purposed for other uses. Metro Park’s mission forward to prepare an application to have the Lodge added to the National Register of Historic Places.

New Gardens

The suny-gardens are one of the highlights of the Park and are part of the historic legacy. Additional themed gardens may be carefully added over time, but should be complementary to the existing and adhere to the policies in the Historic Property Management Plan.

Japanese Garden

There has been a long-standing tradition of Japanese-inspired design in Point Defiance Park starting with the original 1911 Hase & Hase Master Plan and in particular with the construction of the Pagoda in 1914. However, because a master plan for the Japanese Garden was never created to guide design, over the years many elements have been incorporated that do not fit traditional Japanese Garden design principles. In 2012, with funding from the Japanese Foundation through Sister City International, a delegation of Metro Park’s staff and Sister City Liaisons met with Japanese Garden designers to begin developing a new design for the garden. Through this collaborative effort, an authentic Japanese Garden in Point Defiance Park will be designed and built.

Environment and Mitigation Aspects

- Historic Property Management Plan
- Preservation of Keeper’s Lodge in accordance with Historic Property Management Plan
- Management of Significant pines trees
- Traffic revisions and safety of pedestrians
- Stormwater management

Keeper’s Lodge, Constructed in 1888
WATERFRONT

This area of the park will experience the most noticeable changes. A large portion of the Triangle will be cleared as contaminated soils are remediated, a regional stormwater facility is constructed and new boat trailer parking is created. Future planned development is detailed on the next few pages.

LEGEND

- Two-way Vehicular Circulation
- Pedestrian Circulation

1. Improved Access to Ferry and Waterfront
2. Box Trailer Parking
3. Elevated Pedestrian Walkway over Ferry Road
4. New Marine Services Building
5. 150,000 sf of Building Space, up to 4 Stories Tall
6. Event Plaza
7. Parking for 450 Vehicles
8. New Storage Building
9. Parking for 100 Vehicles
10. Restrooms
11. Open Air Event Lawn
12. Add Level to Boathouse
13. Exterior Renovations to Existing Boathouse
14. Estuary and Boardwalk
MASTER PLAN FOCUS AREAS

WATERFRONT PHASE 1

Metro Parks is working with the City of Tacoma and the Environmental Protection Agency on several related projects. This work includes a new park on the Point Defiance peninsula and an innovative regional stormwater facility to filter runoff. Destination Point Defiance envisions an even more accessible, active, and thriving waterfront that allows pedestrian access to Puget Sound.

This project will:
- Extend and improve the waterfront trail system for access to and throughout the waterfront, including building a slikwood pedestrian bridge over traffic.
- Work with the City of Tacoma and State Department of Transportation to redesign the Pearl Street entrance. The project will also add a ferry traffic lane and improve ferry traffic flow.
- Provide a new boat trailer parking lot to support the existing boat launch protect and enhance Puget Sound through habitat and shoreline restoration.
- Integrate green infrastructure enhancements, including constructing an innovative regional stormwater facility to filter runoff.
- Coordinate with the Environmental Protection Agency to remEDIATE contaminated soils from the undeveloped parking area to the northeast of the Pearl Street entrance.

POINT DEFANCE MARINA (PUBLIC)

Multiuse Space, Classrooms and Other Renovate Existing Boathouse and Add Second Level; Conversion of Existing Boat Storage Building to Other Uses

Additional space is needed at the Marina to provide support services and other uses, such as educational programs. There are various location opportunities where such a remodeling space within the existing boat storage facility. The addition of new buildings on the marina is limited, due to spacing and shoreline permitting requirements. A possible solution would be to use the base of the boathouse that has upper floors in an area and add a second floor to it, or to replace it entirely.

Develop Marine Sciences: Aquaculture, fish/shellfish raising, study and release.

Modify Parking to Improve Efficiency

Main parking area will be analyzed and re-striped to increase efficiency. With minor modifications to edges to accomplish this.

Water Taxi

A water taxi service could help decrease vehicular traffic within the Park and surrounding streets. The service would likely be under private ownership and would be run from the downtown Tacoma Waterway to the Marina and Queen Beach.

Environment and Mitigation Aspects
- Shoreline permits required.
- Steep slopes and critical areas.
- Stormwater management.
- Traffic revisions and parking.

Site Workshop - Stephanie Bower, Architectural Illustrator

Boathouse and Anthony’s Restaurant at Waterfront
TRIANGLE

The "Triangular", located near the Pearl Street entrance has provided services to the park since its early days. Over the years, the Triangle's function has been to support the activities in the larger portion of the Park and host activities and services which may have dominated the rest of the Park. The Triangle area contains contaminated soils from previous Azaco Smelter located in the immediate vicinity of the Park. As part of an EPA-funded soils remediation project, the contaminated soils will be excavated throughout the Triangle area. Most will be re-deposited on the step peninsula that creates the adjacent Breakwater Marina, where a new park will be created. Because of the large impact of the soils remediation, much of the land within the Triangle area will be cleared and existing structures relocated elsewhere.

Future Triangle development will provide for an enhanced entrance to Point Defiance Park. Proposed future uses include services to support other activities within the Park. Alternatives could include a lodge and conference center, a new visitor center, restaurant, and Environmental Learning Center facilities.

New Visitor Center: Public Restrooms, Administration, Multiuse Spaces
A new visitor center will provide an opportunity to get interpretive and general information about the Park and the various programs and activities provided. The visitor center will also provide space for Park administrative functions.

Determining the location of the new future Visitors Center will be part of future planning efforts.

Small Retail Shops
Small retail shops located at the Triangle will serve the Park attendees by providing goods and services. Uses could include services such as bike and/or kayak rentals, gift shop, or other amenities typical of parks or regional destinations.

Up to Three Mid-Size and Large Restaurants: or Cafes
Proposed restaurants or cafes would provide an array of services from sit-down meals to quick service concessions.

Lodge and Conference Spaces
The Triangle would be the location of the only overnight accommodations offered at Point Defiance Park. The proposed building is envisioned to serve as a destination lodge with a conference center for corporate retreats or events, approximately 150 guest rooms, and could be four stories in height.

Multiuse Assembly and Environmental Learning Center Spaces to Include Large Assembly Space for 300
A multiuse space that can hold large group events is being planned for the Triangle. This space will be utilized for educational programs and private events.

Event Place for Outdoor Events, such as Farmers’ Market; Staging for Races
A plaza area proposed within the Triangle area. This space is proposed to be unpaved to accommodate festival, farmers’ markets, or other outdoor activities that require an expansive open space.

Park Shuttle Service Headquarters
A shuttle van service could provide connections from parking areas to the main destination areas of the Park. Because of its location at the entrance to the Park and the proximity to a large amount of parking, the Triangle is a logical location for the operations, maintenance, and management of the proposed shuttle service.

Pedestrian Trail Construction on a pedestrian trail connecting to Ruston Way began July 2013. This new trail and elevated walkway is being built across the Triangle to provide a link from Poin’ Ruston to Point Defiance Park. The trail will traverse the Triangle from the southeast and provide direct access into the Bowl area of Point Defiance Park.

Stormwater and Outfall Improvements
The City of Tacoma is undertaking a significant regional stormwater treatment and retrofit project along and adjacent to Pearl Street and State Route 163 as it heads down the hill towards the ferry dock. This project will include the construction of a new stormwater facility designed to collect and convey runoff from the area down to the adjacent the south end of the Park. The new system will collect, treat, and discharge the stormwater through a new outfall located immediately east of the current ferry landing. Construction began July 2011. Excavation for the placement of the stormwater infrastructure will be coordinated with the excavation required for the new boat trailer parking lot.

Boat Trailer Parking for 140
Adequate space for boat trailer parking has always been an issue at Point Defiance. At times of peak use, there is a shortage of parking that accommodates a vehicle and its attached boat trailer. Thorough development of the Triangle will address this issue by providing a new parking lot designed specifically for vehicles with attached boat trailers. The proposed parking lot, because of its intended use, will not have typical landscape elements or stall lining. Instead, it will be designed for maximum flexibility and maneuverability. At times when demand for boat trailer parking is low, this parking lot can accommodate overflow parking for events or other programs.

Parking for 450: Below and Guide Level
The Triangle will provide parking for approximately 450 cars in a combination of surface lots and below-building parking structures, in addition to the boat trailer parking area. Parking will be provided to support the proposed uses at the Triangle end serve to support the need for parking throughout the entire park.

Pedestrian trails and a potential shuttle service will provide connections from Triangle parking to other areas and programs within Point Defiance Park.

Environment and Mitigation Aspects
- Pedestrian access trail management
- EPA soils remediation, shoreline permitting
- Seep slopes and critical areas
- Stormwater management
- Traffic: revisions and dedicated parking
YACHT BASIN AND MARINA (PRIVATE)

This area lies between the Triangle and the Peninsula and includes the immediate shoreline at the bottom of the Triangle. The existing roadway that connects from the Point defiance Marina to the Yacht Club entry has been closed to vehicular traffic with the completion of the connection from Point Ruston and Ruston Way. The Triangle hillside has always had erosion problems and will be reinforced and stabilized with the work currently underway (2015-16) for the Waterfront Phase I project.

Create Additional Boat Moorage Facilities; Expand Boat Ramp Facilities

Additional boat moorage will be provided, and the existing boat ramp facilities will be expanded and enhanced.

New Marina Services Building

A new Marina Services building will be provided in place of the existing, outdated facility. This building will support the operations at the private marina.

Create Esplanade and Boardwalk

At the base of the slope along what is now Marine Drive, a boardwalk will be provided over a newly created esplanade. This boardwalk will allow pedestrians to connect from the updated Lot A to the new boat sailer parking lot, the ferry terminal, and other uses located along the waterfront.

New Storage Building at Parking Lot A

A new storage building will be provided at parking lot A. This building will help serve the needs of users of the yacht basin.

Environment and Mitigation Aspects

- Shoreline permitting requirements
- Pedestrian access trail management
- Steep slopes and critical areas
- Stormwater management

PARK AT THE PENINSULA

A new open-space park will be created on the peninsula, using soil removed from the excavation for the new boat trailer parking lot and Triangle re-grade.

Public Restrooms
Open-air/Ent Lawn with Platform for Events/Performances
Picnic Shelter
Parking for 100 vehicles

Environment and Mitigation Aspects

- BMP soils remediation: shoreline permitting
- Steep slopes and critical areas
- Stormwater management
- Traffic revisions and dedicated parking
**MASTER PLAN FOCUS AREAS**

**CAPITAL PROJECTS / PRIORITIES**

**MANAGEMENT / OVERSIGHT OF CAPITAL PROJECTS**

Common - all of the identified Focus Areas, there are improvements proposed that extend throughout the Park. These generally focus on circulation and access, but also include a broader scope of landscaping and infrastructure upgrades. In addition, future upgrades in Point Defiance Park will also focus on increasing the safety and security for visitors to the park.

At the core of this Master Plan document is a spreadsheet outlining project elements, uses, parking needs, environmental sensitivities, and the projected Capital Improvement Year. The information in the spreadsheet is presented in two formats by focus area in the park and, by estimated construction start dates. These timeframes will be revised over time depending on need and as funding for specific projects becomes available.

**PARKWIDE ELEMENTS**

**Circulation Plan**

- A multi-modal system will be designed that will incorporate two-way traffic flow between Park Street, the Zoo, Mildred Street, and Fort Nisqually. This new system will significantly reduce vehicular traffic through the park and provide more direct access to main destinations. In addition, it may be possible to work with Pierce Transit to provide service to these destinations if they are more easily accessible.

- Pedestrian and bicycle safety is a priority within the Park. It is the intent to ensure a 12’20” wide, unshared Pedestrian / Bike path that would be continuous from entry points to major destinations within the Park. This path would extend from the southeast corner of the Park to the entrance of the Foxville Drive loop that is closed during scheduled times. Foxville Drive would continue to be closed during selected hours for bike and pedestrian use only.

- Incorporation of a future shuttle during high-use activities and seasons will be assessed. This would likely be based in the Triangle.

**Intensify Use and Development**

The Park currently divides into three distinct transition from the most intensive use areas of the park at the entrance to the least intensive and mostly passive area of the park within the forested areas. Uses within the most natural element of the Park, the forest and old growth areas, will remain consistent with the character that has been preserved forever - 100 years. Trails and overlooks need ongoing management, especially in areas adjacent to bluff edges.

The central area of the Park extends from Owen Beach down through the central forest, and includes the Fort, the former Camp 6 area, and the Baker Tract. This is a transition area between the most active part of the Park to the southeast, the Entrance Way and Waterfront Zone, and the most passive, the Forest Zone, to the northwest. While programs will be planned for this area and support structures will be built, a careful balance is needed to preserve the natural character of the Park and limit negative impacts. Increasing automobile impact by providing more direct access to destinations when increasing the pedestrian and bicycle access through an unshared path system needs to be emphasized.

The eastern third of the Park is the most active and heavily used. The main entrance at Pearl Street is used by 75% of visitors accessing the Park’s destinations. Heavy automobile use through the bowl of the park during high season use time can be cumbersome, impact user enjoyment, and creating unsafe environments for pedestrians. Traffic studies have proposed modifications to roadways, creating some two-way elements and reversing directions of some one-way streets, which will bring car more directly to main destinations and decrease the numbers of cars driving through the middle of the Park unnecessarily.

**Landscape**

Landscape within the Park will continue to promote the Park character. The envision new elements will be designed to maintain that character and Point Defiance landscape requirements will be net. New parking lots will incorporate landscaping within the parking field to minimize the visual impact. However, navigational requirements within local parking areas will take priority, with replacement landscaping being provided around the edges as appropriate.

**Infrastructure Inventory / Plan**

Metra Parks is working with City and public utilities staff to determine the most appropriate way to turn utilities and infrastructure over to the appropriate organizations. All utilities will be upgraded on an ongoing basis as projects are developed. The following services will receive upgrades to meet current standards in order to be turned over to the utility providers:

- Stormwater
- Power
- Water
- Sanitary Sewer
INTRODUCTION

"Very often in our culture as places develop, we lose our sense of place. We lose the sights, sounds, smells that most positively impress us as children. Americans need places that are touchstones of their existence as a culture, places where wilderness and history are paramount. More and more, the national parks are the symbols for our national history and natural identity. Reverence and excellence in the stewardship and development of these parks is part of America's heritage."

— John J. Reynolds, Retired, National Park Service, February 2004

Point Defiance Park has been a prized landmark for over 100 years. How do we build upon what many consider as sacred ground? This will be an ongoing challenge that all designers must face when working within the Park, continuing through the foreseeable future. Many hands have touched this Park, working over the years to create a built environment that has provided enjoyment for many visitors and generations to come. The natural setting, old growth forests, historic structures and gardens, and the overall cultural landscape, have become part of the total Park identity and visitor experience. Metro Parks and the City of Tacoma recognize that in order to uphold Point Defiance Park as a special place, development must be designed to be compatible and respectful of the Park setting, both natural and man-made.

PURPOSE

These Design Guidelines are intended to provide a framework for deciding appropriateness of the architectural and landscape character of new buildings, site work, and alterations. Creative professionals from many different fields will be tasked with the sensitive requirements of working within this setting. These guidelines go beyond basic universal principles of good design and focus on the character qualities in specific areas of the Park that are effective and contribute to each locale.

Development must complement the natural and historic setting, blending in as though part of it, but at the same time should be distinctive enough to emphasize the special nature of the place. New facilities should be designed in a way that establishes a continuity with the most successful design elements of the past, while creating a respectful consistency between old and new. The resulting built environment should enrich the whole area, become part of the evolving landscape.

Goals of the Design Guidelines include:

- Retention of natural site character, including setting, materials, and ecological processes. Critical areas such as wetlands or steep slopes should be avoided and improved, if possible.

- Where applicable: adhere to the Secretary of Interior’s Standards for the Treatment of Historic Properties.

- Design new buildings and facilities to blend with the natural environment, emphasizing non-intrusive design. Be sensitive to environmental capacity of the site to absorb modifications. Facilities should be an element of the site rather than dominate the landscape. Buildings are subordinate to the environment.

- Complementarity of structures and facilities with the cultural context and character in which they are located and protection of cultural integrity.

- Coordination and integration of the design of individual structures with those of the site plan as a whole.

- Enhancement of unifying architectural and landscape themes and elements within defined areas and throughout the Park.

- Emphasis on simplicity and restraint in design and respect for past building character, traditions, and practices.

- Recognition of the principles of rustic design used by previous designers, identification of those who retain validity today, along with appropriate locations for such, and contemporary interpretation of those principles.

The Design Guidelines will assist Metro Parks staff and designers to make informed and consistent decisions as facilities and development is planned, designed, constructed, modified, and maintained. They provide background information on the development and most important design characteristics of the built environment. The detailed guideline sections provide direction as to which design strategies and themes may be suitable for particular areas. These recommendations recognize that neither buildings nor the landscape setting can be treated separately and need to be integrated in order to exist in harmony.

Implementation of these Design Guidelines will contribute to the successful fulfillment of overall Park goals of preservation of character and visitor enjoyment. The result should be buildings and landscapes that fit in with the natural surroundings and relate respectfully to the existing cultural landscape of Point Defiance Park. The evolving built environment should ultimately enhance the remarkable sense of place within the Park.
CONSISTENCY WITH HISTORIC PROPERTY MANAGEMENT PLAN

These Design Guidelines are intended to be used in conjunction with the Master Plan Update prepared by BEIRA and the Historic Property Management Plan (HPMP) prepared by Artifacts Consulting, Inc., for Point Deiance Park in 2015. The Master Plan Update directs the future development of the Park while the HPMP details historic and existing buildings, locations, landscape features, views and other aspects of the Park, and designates levels of significance. Modifications to existing significant elements must be performed according to the HPMP and reviewed by the applicable agencies.

INADVERTENT DISCOVERY PLAN

Where activity involves no ground disturbance or where ground disturbance would extend no deeper than the lesser depth of fill at that location, no further action is required to address the possible effects to archaeological resources from the proposed activity. As artifacts have occasionally been encountered in fill, however, should artifacts or evidence of archaeological deposits be observed in such activity, further disturbance in the immediate vicinity of the find should cease immediately and appropriate Metro Parks staff notified as defined in the Inadvertent Discovery Plan.

Where activity involves ground disturbance greater than one foot deeper than the current ground surface in an area in which there is little or no evidence of the presence of fill, a systematic pedestrian survey will be conducted if the area of activity extends over an area greater than one acre and:
1. no previous surveys for archaeological resource have been conducted in the activity area within the past 10 years that meet current state and federal standards; and
2. is in an area designated as having a moderate to high probability for archaeological resources documented in the Cultural Resource Assessment by Willianette Cultural Resources.

If the proposed activity would extend over an area of one acre or less and meets conditions 1 and 2, a qualified archaeological will monitor the ground disturbance within the terms of the Inadvertent Discovery Plan.

GENERAL REQUIREMENTS

1. EXISTING CHARACTER

A. Inspiration for facility designs within Point Defiance Park should come from the landscape, its ecological and cultural history, and existing and past architectural structures, as may be considered appropriate.
B. Design should not necessarily repeat historical precedent, but instead, should convey a contemporary expression consistent with the rich design tradition of Point Defiance Park and honor the particular uniques of the place.

2. SUSTAINABILITY

A. Sustainable design concepts should be incorporated in new construction and renovations to existing structures. This is design that seeks to minimize long-term impacts to the earth's environment through strategies such as adaptive reuse, recycling, reducing material and waste consumption, energy efficiency, life cycle cost analysis, long-term operation, maintainability, and using vernacular or local methods, materials, products and crafts.
B. It is recognized that a large measure of sustainable practices can be supported through restoration and maintenance of the existing natural elements of Point Defiance Park. The addition of native plants, management of stormwater through natural drainage systems, maintaining trails and restoring non-sanctioned trails back to forms, are all excellent examples of primary contributions toward sustainability within the Park.

3. EQUITABLE ACCESS

A. Providing equal access means ensuring that all individuals can make use of facilities, transportation, buildings, and facilities, programs and services, employment opportunities, and technology.
B. Designers of barrier-free access routes need to examine the significance levels of approaches to existing buildings and places and seek pathways that balance the retention of character-defining spaces while providing for access.
C. Design of new playgrounds should follow the design standard for universal access and be fully inclusive.

4. SITE DESIGN

A. Locate facilities sensitively and appropriately within the landscape to preserve resources and enhance the Park's natural beauty.
B. Locate facilities to be subordinate to landscape features.
C. Place structures at the edge of existing clearings to preserve vegetation and views and to promote coexistence within the setting rather than dominance.

5. BUILDING DESIGN

A. Building design should portray the character of the Park and be compatible with other existing building styles, elements, materials, and massing.
B. Forms should be substantial and exhibit a sense of permanence.
C. A building's primary entrance should face the public space and be easily identified through the use of a large door or framing devices (e.g., deep overhangs, recesses, porches, arches, arcades, etc.). Other architectural elements, or landscape techniques.
D. The mass of the proposed building should be compatible with those of surrounding buildings or other buildings of a similar type in the Park.
E. Pedestrian paths should have a significant slope of at least 5%. Use of flat roofs is discouraged.
F. A variety of different textures, complementary colors, shadow lines and contrasting shapes provide attractive facades and should be incorporated into the design.
6. MATERIALS AND COLORS
   A. Exterior materials should be compatible with those of surrounding buildings.
   B. Interior materials and the appearance of rear and side facades should be similar to and compatible with the front or primary facade.
   C. Choice of exterior materials:
      I. All exterior materials should be sufficiently durable to ensure stability, maintainability, and long life.
      II. Natural materials such as wood, stone, and masonry are preferred.
      III. Smooth-finish concrete block may be used only as a foundation element.
   D. The color and materials used should reflect a general theme of environmental harmony with the surrounding topography and characteristics of the setting. Within a wooded setting, buildings would be expected to be more muted with earth tone colors, while beside the zoo or at the front entrance to the park, buildings may be more vibrant and dynamic in character.
   E. Accent colors should be used sparingly and be complementary to the more natural earth tone color palette.

7. SCREENING OF MECHANICAL EQUIPMENT, TRASH, AND SERVICE AREAS
   A. All service, loading and trash collection areas should be screened with a material compatible with the building or should be landscaped to minimize impact.
   B. Wherever possible, avoid locating service, loading, and trash collection facilities in pedestrian-oriented areas.
   C. Rooftop equipment should be located so that it is not visible from pedestrian-oriented areas or general public view.

8. LANDSCAPING
   A. A Forestry Stewardship Plan was created in June 2010 to ensure quality management of this resource. Any landscaping improvements will require compliance with this Plan.
   B. Use native plant materials to provide interest, to create a relationship to a fading natural surroundings, to support biodiversity; and to reduce the need for irrigation or maintenance.
   C. Where placing new facilities, structures, or improvements near the property boundaries of the Park, provide landscape screening along edges, especially at approaches to residential areas. This applies to all areas of the Park except those areas which have historically been open to view.
   D. Landscaping within parking lots, most notably at entrance trailer parking, should comply with City regulations whenever possible. However, landscape requirements will take priority, eliminating some internal locations and instead placing additional landscaping around the edges as appropriate.
   E. Maintain historic and significant trees, gardens, and landscaping in accordance with Historic Property Management Plan (HPMP).

PARK AREAS

1. FOREST AREA
   A. Open shelters and exterior building and other structures within this zone would be consistent with Park use. These should be in style and be complementary with other in evidence throughout the Park.
   B. Trail enhancements and other features added should be key and blend into the surroundings.
   C. Maintain historic and significant trees and landscaping in accordance with Historic Property Management Plan (HPMP).
   D. Materials and colors:
      I. All exterior materials should be sufficiently durable to ensure stability, maintainability, and long life.
      II. Natural materials such as wood, stone, and masonry.
      III. Earth tone colors.

2. FORT NISQUALLY
   A. Buildings outside the Fort should be consistent in style and be complementary with existing in this area. Those within the Fort should be in keeping with the historic time period of the fort.
   B. Trail enhancements and other features added should be key and blend into the surroundings.
   C. Materials and colors:
      I. All exterior materials should be sufficiently durable to ensure stability, maintainability, and long life.
      II. Natural materials such as wood, stone, and masonry.
      III. Mostly natural wood, stained or weathered to match existing. Some buildings may be painted with accent colors in earth tones, red or white, matching existing.

3. FORMER CAMP 6
   A. Access off Mildred Street is a secondary entrance to the park and as such entrance elements and other structures should be on a smaller scale and be subordinate to the wooded setting.
   B. Trail enhancements and other features added should be key and blend into the surroundings.
C. Materials and colors:
   I. All exterior materials should be sufficiently durable to ensure stability, maintainability, and long life.
   II. Natural materials such as wood, stone, and masonry.
   III. Earth tone colors.

4. BAKER TRACT
A. Buildings within this zone would be accessory structures and should be rustic in style and complementary with those in existence throughout the Park.
B. Park Maintenance facilities will be located as far as practical from public areas and densely screened with landscaping.
C. Trail enhancements and other features added should be low-key and blend into surroundings.
D. Materials and colors for public structures:
   I. All exterior materials should be sufficiently durable to ensure stability, maintainability, and long life.
   II. Natural materials such as wood, stone, and masonry.
   III. Earth tone colors.

5. OWEN BEACH AND PROMENADE
A. Buildings within this zone would be minor structures, rebuilding restroom and concessions, with some small scale multiuse space. These should be rustic in style and complementary with those in existence throughout the Park. They should also be resistant to weather conditions related to seawater proximity.
B. Trail enhancements and other features added should be low-key and blend into surroundings.
C. Materials and colors:
   I. All exterior materials should be sufficiently durable to ensure stability, maintainability, and long life.
   II. Natural materials such as wood, stone, and masonry.
   III. Earth tone colors.

6. POINT DEFIANCE ZOO & AQUARIUM
A. Buildings, site elements, and landscaping within the fence line of the Point Defiance Zoo & Aquarium are of a design and character of a premier destination zoo. New elements should be reflective of that and compatible with the Zoo as a whole.
B. Materials and colors:
   I. All exterior materials should be sufficiently durable to ensure stability, maintainability, and long life.
   II. Materials and colors may be more diverse in character, design, and palette than the rest of the Park.

7. ENTRANCE AND BOWL
A. No new buildings are currently contemplated within this zone. Renovations to existing buildings should remain in character. Renovations to historic structures should be approved through the appropriate agencies.
B. Elements near the front of the park would announce the park and give clear direction to locations. An entrance roundabout is proposed to create a safer, more efficient, clear circulation facility.
C. Materials and colors:
   I. All exterior materials should be sufficiently durable to ensure stability, maintainability, and long life.
   II. Natural materials such as wood, stone, and masonry.
   III. Earth tone colors.

8. POINT DEFIANCE MARINA
A. Renovations and/or additions to buildings within this zone would be in keeping with the existing buildings and the historic design and layout of buildings along the water’s edge. They should also be resistant to weather conditions related to seawater proximity.
B. Materials and colors:
   I. All exterior materials should be sufficiently durable to ensure stability, maintainability, and long life.
   II. Natural materials such as wood, stone, and masonry.
   III. Earth tone colors.

9. TRIANGLE
A. This area of the Park is the most commercial overall. Buildings within this zone would be dominant in the setting, consisting of 2-4 stories.
B. All buildings will be designed to function cooperatively around a central plaza with parking and landscaping elements.
C. Materials and colors:
   I. All exterior materials should be sufficiently durable to ensure stability, maintainability, and long life.
   II. Materials and colors may be more diverse in character, design, and palette than the rest of the Park.

10. YACHT BASIN AND MARINA
A. This marina area is currently leased to a private organization and is not considered an element of Point Defiance Park. If this marina is incorporated into the Park at some point in the future, this section of the Design Guidelines will be amended.
B. Buildings within this zone would be accessory structures at most and should be complementary with those within the vicinity.

11. PARK AT THE PENINSULA
A. Buildings within this zone would be accessory structures at most and should be complementary with the yacht club and those within the vicinity.
B. Materials and colors:
   I. All exterior materials should be sufficiently durable to ensure stability, maintainability, and long life.
   II. Natural materials such as wood, stone, and masonry are preferred.
   III. Earth tone colors or colorfield are complementary to those of the Tacoma Yacht Club.
IMPLEMENTATION

DEVELOPMENT REGULATIONS / STANDARDS

Taken in total, work within the Park would require multiple review processes that would be unable to individually encompass the breadth of work or manage all the related elements that will be affected by the full scope of the Master Plan. In 2015, Metro Parks staff and their consultants met with City staff to discuss appropriate ways to manage the volume of work that could happen at the Park over the next two decades. It was determined that a Development Regulation Agreement (DRA) was a logical and time-saving course of action, as it will provide one comprehensive review of the proposed park programs and is an appropriate review process for managing the Master Plan. The formalized Development Regulation Agreement (DRA) with the City that will allow an efficient, economical, and streamlined permitting process to occur.

This Master Plan Update, as required by the City's DRA process, is a vital tool in the coordination between the City of Tacoma and Metro Parks as they move forward to implement future programs, facilities, and infrastructure maintenance and upgrades over the next 20 years.

PURPOSE OF A DEVELOPMENT REGULATION AGREEMENT

The DRA process provides a degree of flexibility for how the City's development regulations are applied, so that any required mitigation and conditions of approval are specifically tailored to the proposed project. This protects the community vision and secures significant public benefits.

The DRA approval process allows for site-specific negotiated benefits in exchange for regulatory conditions that will apply to the project over the life of the Agreement. In addition, the DRA process provides predictability for a development project applicant that government approval of the project may proceed in accordance with existing policies and regulations. Subject to conditions of approval, this will strengthen the public planning process, encourage private-participation and comprehensive planning, and reduce the economic cost of development.

Project approval is designed so that anticipated project elements are realized according to approved terms and conditions. A Master Plan of the park, attached to the Agreement, will be the basis by which development is reviewed, both before and after the DRA is adopted by the City Council.

DESIGN STANDARDS

Point Defiance Park is located in the R1 Single Family Residential district in the City of Tacoma, a destination park such as this will always exceed the typical design standards a residential zone, since anything outside a typical residential use would require a Conditional Use Permit (CUP) or a Rezone. The DRA will allow for minor variations from the zone, such as additional height or non-traditional uses, in exchange for the public benefit of having a remade park. This well-loved Park will continue to be thoughtfully planned, with input from the public, in order to serve as a city jewel for generations to come.

Included in this document is a spreadsheet for intended development, which lists areas, uses and building heights, and approximate locations. Mitigation for these elements should address both internal and external impacts. Environmental considerations are included in the spreadsheet for appropriate benefits as each development moves ahead. Parking needs must be considered in conjunction with respective programs for sufficient capacity and shared-use possibilities for both current and future programs.

TEMPORARY USES AND LOCATIONS DUE TO CONSTRUCTION ACTIVITY

Due to coordination requirements for construction activity, there will be many ongoing efforts to provide temporary support services, including parking locations, routes to continue to adequately service park needs. The City of Tacoma will finance certain requirements, such as hard-surface finishing for temporary parking, for these temporary conditions. Temporary, as defined by City Code, in a maximum of five years. Temporary conditions will be reviewed and monitored by City staff.

AMENDEMENTS TO MASTER PLAN AND DRA

The Point Defiance Master Plan is a living document. Ongoing updates will be added to the Plan as areas such as Fort Nisqually, the former Camp 6 area, Owen Beach, and the Triangle are planned in more detail. Each of the seven identified focus areas in this Master Plan Update will undergo future planning efforts that may include a schematic design process and future technical analysis. Metro Parks Tacoma will undertake continued public involvement as they advance each of the Master Plan Update’s seven focus areas for implementation. When completed, detailed plans for each of the focus areas will be included as appendices to this document. Each area plan will include a significant public outreach process to refine recommendations and develop final schematic plans to advance final implementation.

This Master Plan Update will be a vital tool in the coordination with the City of Tacoma as Metro Parks moves forward to implement these recommendations over the next 10 years. This Master Plan will continue as the guiding document for the Park after the limited timeline of the DRA ends.

The DRA is intended to vest development for a period of 20 years. Not all portions of the Master Plan will be implemented in that time period, and some elements of the plan may change over those years.

Modifications

Future modifications to the Development Regulation Agreement must be applied for by written application to the DRS Director. Such modifications will only be approved if the POS Director determines they are within the scale and scope of the Master Plan and any project theretofore described in the Development Regulation Agreement and its attachments.

Modifications to the DRA will be legislated as defined by TMC 10.05.080 B. Modifications that are deemed as minor will be reviewed by City staff with review and decision by the Director. This Agreement establishes a recurring five-year review timeline to modify and amend the Master Plan components. At this time, all work will be reviewed and updated with the Master Plan.
IMPLEMENTATION

PROJECT REVIEW PROCESS

METRO PARKS TACOMA – SCOPE DEFINITION

Each capital project undertaken by Metro Parks will be initiated with a Brief Scope Definition Document. It includes a brief description of the key features of the project including Project Funding, Scope of Work, Project Budget, Project Strategy, Client Considerations, Permit and Regulatory Considerations, Communication Considerations, Project Schedule, Constraints and Limitations.

METRO PARKS GROUPS INVOLVED IN PROJECT REVIEWS

CAPITAL PROJECTS GROUP (CPG): The CPG will be the primary vehicle for Metro Parks in-house project reviews. It will include see representative from each department as described above.

STEERING COMMITTEE
For each specific project, the Project Manager will assemble a committee composed of individuals representing neighborhood interests, park facility users, and MPT staff representatives likely to be assigned to program, maintain, and manage the completed facility.

MPT TECHNICAL COMMITTEE
The Technical Committee will be charged with conducting detailed technical review of contract documents prior to final permitting and bidding.

MPT DIRECTOR AND SENIOR STAFF
For steps in planning and design that involve Park Board review, the Metro Parks Director and department heads may wish to receive specific briefing and be provided with the opportunity to provide comment prior to placement of the required project review on the Board agenda.

CAPITAL IMPROVEMENTS COMMITTEE (CIC)
The Capital Improvements Committee is a committee of the Park Board charged with informal review responsibility for all capital development activities prior to submission to the Park Board for formal review.

MPT BOARD OF PARK COMMISSIONERS
The Metro Parks’ Board is responsible for policy oversight and approval of financial commitments above established administrative limits. In accordance with financial limits and already-established procedures, the Park Board will formally approve contracts by resolution, and will accept construction contracts at contract close-out.

PLANNING, DESIGN AND DEVELOPMENT REVIEW PROCESS

Planning projects carried out under the capital improvement program will focus on identifying and scoring subsequent capital improvements. They will not result in final design documents and construction.

Three-Phase Planning Process:
This will be used as a general outline for planning projects that develop site master plans and make significant decisions concerning future capital project decisions. Emphasis is placed on creating a rational sequence of decision making and providing ample opportunity for the public to influence our planning decisions.

Design and Construction Process:
Standard Design/Bid/Build Process: This is the process Metro Parks will use in developing full design documents, bidding, and building larger capital projects. In general, the process is tied to the phases of design described in the District’s standard A&E services agreements.

CITY OF TACOMA – COMPLIANCE WITH DRA AND CITY MUNICIPAL CODE

Prior to submittal for permits, projects would be before the City to be reviewed at an Initial Scoping Meeting. Prior to the meeting, the City Planner, who is assigned to oversee the DRA, will review the project for compliance with the DRA. Mitigation of environmental impacts will be discussed for appropriateness.

In addition to the environmental studies provider for the DRA-SEPA applications, project specific analyses can be reviewed by an Annual and/or Five-Year Programmatic Review schedule with Metro Parks Tacoma under the DRA and an administrative amendment process.

SITE DEVELOPMENT REVIEW

Off-site improvements will not be reviewed for the roads inside the Park by Site Development. Off-Site improvements may be required for perimeter roads around the Park. If traffic engineering requires road improvements within or along the perimeter, Site Development will provide specifications and process for those improvements.

SHORELINE ENVIRONMENT

A large portion of the Park is bounded by shoreline. Development activity within 200' of the ordinary high water mark of “Waters of the State,” which includes the waters adjacent to Point Defiance Park, fall within the jurisdictional purview of the Washington State Department of Ecology. Washington State Department of Ecology categorizes the shoreline into different shoreline zones. Within Point Defiance Park there are several shoreline zones: 5A, 5S, 5L, and 3L. It is also a designated Shoreline of Statewide Significance, so statewide interest must be recognized and protected over the local interest. To ensure that statewide interests are protected, the City is required to review all development proposals within the 200 feet shoreline setback with consistency with RCW 90.18.020 and other regulations.

While elements of the Master Plan falling within the shoreline area are included to show intent, it will be required that future development within the shoreline must be reviewed and permitted through the Shoreline Process. Elements of the Master Plan that are within the Shoreline have been carefully considered for appropriate treatment with the applicable shoreline zone and the environmental designation.

All work within 200 feet of the Ordinary High Water Mark (OHWM) will require shoreline permits through the City of Tacoma, and possibly other state and federal permit review.

CRITICAL AREAS REVIEW

In general, Metro Parks Tacoma plans to avoid all wetland, streams, and their buffers with development (including all construction activities) under its 20-Year Master Plan. If this is the case, then critical areas permits will not be needed. However, hydrology and soils information will be required for all projects within 300 feet of a known critical area and review under the building permits will be conducted to makes sure that hydrology to and from the critical areas will not be impacted.

As project scope and locations are better defined, if impacts to a critical area or if buffer is anticipated, then application for and fee for the required critical area permit(s) and SEPA Environmental Check(s) will be submitted and reviewed under the Critical Areas Pre-Application Code at the time.

In addition to the environmental studies provided for the DRA-SEPA applications, project specific analyses can be reviewed on an annual and/or Five-Year Programmatic Review schedule with Metro Parks Tacoma under the DRA and an administrative amendment process.
TRAFFIC AND PARKING REVIEW

A Transportation Analysis has been provided that reviews overall traffic and parking issues within the parks. Additional parking allocations have been detailed in the Project Benefit Spreadsheet at the end of this document. Additional parking proposed in each area is listed first. As projects get underway, Metro Parks will determine the appropriate number needed to support specific usage.

ENVIRONMENTAL SERVICES

On-site management for stormwater is the first solution. If this is not feasible, other options will be considered. Design would be approved to the current Stormwater Management Manual in place at the time of permits. New storm and storm sewer mains designed and constructed per City Standards may be taken over by the City.

UTILITIES

For water and power utility systems currently operated and maintained by Metro Parks Tacoma within Point Defiance Park, Metro Parks will design and construct upgrades to utilities that meet material, assembly, construct, and operating standards of each utility’s provider. The understanding is that Tacoma Water will maintain upgraded water facilities to the meter, Tacoma Power may in the future assume operation and maintain power facilities to what will become secondary service metered locations.

HISTORIC PROPERTIES

Review of proposed changes to historic properties and sites occurs at the local, state, and federal levels depending upon the extent of proposed work, the funding sources, permitting involved, and the significance of the affected property.

Maintenance and Minor Repairs

Approval of maintenance and minor repairs for Tacoma Heritage Register-listed properties is not required if repair does not remove or alter historic fabric. Administrative review may be required under Section 2.4 of the Landmarks Preservation Commission Rules and Regulations for in-kind replacement of materials not requiring structural modifications, and charges not visible from the public right-of-way.

Maintenance and minor repairs of other significant (but unlisted) properties within the Park are not subject to external design review, but should comply with guidelines developed in the HMP.

Major Projects

Major projects are generally defined as activities requiring a building permit. Project review is generally recommended and/or required by local, state, and federal agencies during planning stages depending upon which permits are needed and/or state or federal funds are used. This review would occur as part of the SEPA (RCW 43.21 State Environmental Policy Act) and/or NEPA (President’s Council on Environmental Quality National Environmental Policy Act 43 U.S.C. § 4321 et seq) address impacts to historic properties and sites. The Department of Archaeology and Historic Preservation (DAMP) is the review entity for all state and federal review.

City of Tacoma

Tacoma Landmarks Commission (TLC)

- TMC 10.07 Landmark and Historic Special Review Districts require design review of all external alterations to properties listed on the Tacoma Heritage Register

State of Washington

Executive Order No. 2005

- Executive Order No. 2005 requires review of capital construction and land acquisition projects funded through the State of Washington and not undergoing review through the Federal Section 106 process.

Federal

Section 106 Review

- Section 106 of the National Historic Preservation Act 14 U.S.C. 306108. requires review of any federal undertaking (including actions, grants, and permits for effects on historic resources. Project action or eligible for the National Register of Historic Places are subject to review. Provisions includes the federal agency, OAHP, affected Tribes, and affected stakeholders. Review addresses avoidance or mitigation of potential adverse effects

Section 471 Review

- Section 471 of the Department of Transportation Act, 49 U.S.C. § 303 and 23 U.S.C. § 138 addresses impacts on historic properties and parks for federally-assisted transportation projects. The law applies to properties listed on or eligible for the National Register of Historic Places and potentially those listed on state and local historic registers. Provisions include the federal agency, OAHP, affected Tribes, and affected stakeholders. Review addresses avoidance or mitigation of potential adverse effects.

ASSIGNING APPROPRIATE MITIGATION

Mitigation for projects will be reviewed for project-specific impacts and adjacencies to other program elements. Each project development project can provide suggested mitigation for the development that include a broad range of possibilities that can be project- or park-focused.

All project development will provide some level of environmental sustainability, and this contribution is included in each project’s mitigation requirements. This is attributable to the design and management of the environment, including stormwater systems and Low Impact Development (LID), in addition to other sustainable decisions that may include building certification through programs such as Leadership in Energy and Environmental Design (LEED).

All projects that bring additional activity to the park will be required to address access and parking needs. This will be reviewed in conjunction with previous work and future proposed work to provide sufficient capacity and to promote shared use.
MOVING FORWARD

The Master Plan provides important guidance for Metro Parks’ continued management of Point Defiance Park. It represents a high-level, long-term vision of the Park’s development. There are many details still to be worked out. These details include but are not limited to:

- Circulation/parking
- Infrastructure upgrades
- Schematic design/detailed cost estimates for focus areas

Circulation/Parking:
The Master Plan has highlighted the need to look more in depth at the circulation patterns for automobiles, bicycles, and pedestrians. After plan adaptation, MPP will commence a more detailed schematic design effort to improve the safety and efficiency of the roadways, trails, and parking areas within the Park.

While the focus of the Master Plan Update involves the facilities and programs to be implemented long-term, the public discourse reflected the importance of maintaining and upgrading the infrastructure that the facilities programs rely upon: function properly. Infrastructure upgrades, such as utility, trail, and signage improvements, will be incorporated into capital projects as appropriate.

Schematic Design for Focus Areas

In order to advance the projects to implementation, more extensive information and design work will be needed. Just as important, however, will be the continued public involvement we will undertake as Metro Parks advances each of the Update’s seven focus areas for implementation. When completed, detailed schematic plans for the focus areas will be included as appendices to this document. Each area plan will include a significant public outreach process to refine program and facility recommendations in order to develop final schematic plans to advance final implementation. In addition, detailed cost estimates will be included as part of the schematic design to determine funding and sequencing needs.

Master Plan Build-Out and Funding

The Master Plan Update represents an ambitious development program with over 70 projects listed in the Project Elements Spreadsheet. General timelines associated with project completion have been included for planning purposes; however, the actual sequence of project development will depend upon several factors including results of schematic planning efforts, available funding, logical planning and development sequencing opportunities, permit timelines, and others. Two important tools in the implementation of the Master Plan Update are:

- Development Regulation Agreement (DRA)
- Metro Parks 6-year Capital Improvement Program and Biennial Budget

Development Regulation Agreement (DRA)

This Master Plan Update will be a vital tool in our coordination with the City of Tacoma as Metro Parks moves forward to implement these recommendations over the next 20 years. As part of the process, Metro Parks will enter into a Development Regulation Agreement (DRA) with the City that will allow an efficient, economical, and streamlined permitting process to occur. The 20-year agreement provides a consistent baseline for development that development must follow applicable standards and regulations. It also provides for updates every 1 to 2 years to reflect changing conditions.

Metro Parks 6-year Capital Improvement Program (CIP) and Biennial Budget

The Point Defiance Master Plan Update provisions will be implemented through the Metro Parks 6-year Capital Improvement Program (CIP) and biennial budget. The CIP— which is updated in a public process every 2 years during the budget process—reflects capital development priorities, timing, and anticipated funding for projects. It covers park acquisition and development projects throughout the entire parks system.

As Metro Parks continues to develop schematic plans and projects consistent with the Point Defiance Master Plan Update, they will be included in the 5-year plans. Funding allows. Several projects currently underway identified in the 2021-23 bonds. However, Metro Parks does not anticipate that this funding will be able to cover all of the listed project elements. Significant progress has been made in leveraging 2014 bond revenues with other funding sources. Metro Parks has a history of developing successful partnerships to generate funding to implement high priority projects. These efforts will be reflected in the ongoing 5-year CIP and will be an important component in the development of the master plan facilities.
The next three pages contain a spreadsheet of anticipated work throughout the Park (organized by focus area within the Park), with as much detail as was available at time of printing. This spreadsheet is the main resource for project specifics and will be updated on a regular basis.

Cut and Fill numbers are approximations to give a general scope. Where no cut and fill is anticipated it is indicated with N/A. Where there are many unknowns to make fair approximations, the cell has been left blank. Building heights are only noted when projects are anticipated to be equal to or greater than 33’ in height. Proposed parking is listed as a total by area. Metro Parks will determine appropriate parking allocations as elements are designed. This is based on the Transportation Analysis provided by Trimaran Associates.

NOTE: Not all projects listed here have been funded for construction at this time. The 2014 public bond measure will help pay for specific identified projects. Grants, future bond measures, and other funding sources will be sought after and used to help pay for other projects listed here. Project CIP dates are based on a Capital Improvement Program utilized as part of the Metro Parks Biennium Budget process. The CIP is updated on a regular basis to reflect the current identified projects and priorities. Year shown indicates the start date of the project with an approximate completion date in the following column. If multiple years are shown it indicates that there are multiple projects to be undertaken within the indicated time frame. Not all projects identified here may get built. Future updates to this Master Plan will have an updated version of this spreadsheet.

### Project Elements Spreadsheet - By Estimated Construction Date

The next three pages contain a spreadsheet of anticipated work throughout the Park (organized by estimated construction start date), with as much detail as was available at time of printing. This spreadsheet is the main resource for project specifics and will be updated on a regular basis.

Cut and fill numbers are approximations to give a general scope. Where no cut and fill is anticipated it is indicated with NA. Where there are too many unknowns to make a fair approximation, the cell has been left blank. Building heights are only noted when projects are expected to be equal to or greater than 35 ft in height. Proposed parking is listed as a total by area. Metro Parks will determine appropriate parking allocations as elements are designed. This is based on the Transportation Analysis provided by TrigTight Associates.

**NOTE:** Not all projects listed here have been funded or constructed at this time. The 2014 public bond measure will help pay for specific identified projects. Grants, future bond measures, and other funding sources will be sought after and used to help pay for other projects listed here. Project CP dates are based on a Capital Improvement Program utilized as part of the Metro Parks Biennial Budget process. The CP is updated on a regular basis to reflect the current identified projects and priorities. Your sheet indicates the start date of a project with an approximate completion date in the following columns. If no end date is shown it indicates that there are multiple projects to be undertaken within the indicated time frame. Not all projects identified here may get built. Future updates to this Master Plan will have an updated version of this spreadsheet.

Please request a current copy of this table from Metro Parks Tacoma.
