Waking your computer instructions for remote users:

Type  http://ascot01/wra into your browser to access the Verdiem SURVEYOR Wake on Web home page. The address directs you to the following web page.

1. Enter the name of the computer or IP address of the computer you want to wake up, and then click Search.

TIPS:

- If you want the browser to remember this computer name, select the Remember search criteria check box.
- You can also search for computers by entering at least three characters and using wildcards, such as, ATCAA*.
- Additional tips are provided on the right side of the Wake on Web browser pages.

2. If the computer you want to wake is listed in the search results, click Wake.

NOTE: To determine whether the computer is reachable, click Ping. A list of computers with names that match your search phrase is shown. By default only the first five computers are listed.
The wake request progress is shown on the Wake on Web page.

3. **When the status shows Computer is ON, you can log in to your computer using Remote Desktop.**

If the computer does not respond after 30 seconds, the status indicates that the Wake on Web server could not reach your computer. Try to wake the computer again and if you receive the same result, please contact the ITST Service Desk at 591-2057 for assistance.
