

## **7.0 CONCLUSION AND RECOMMENDATIONS**

The management plan provided in this report was designed to address landscape and vegetative challenges identified for Schuster Slope and to provide strategies for slowing slope erosion, improving forest health and stormwater benefit, ensuring public safety and allowing for improvements to views from adjacent areas. Included in this management plan are management goals, objectives, and standards with management options and implementation tools to ensure the best possible approach to managing this project area with the above priorities in mind.

This report was written to provide the City of Tacoma and the public with specific vegetation management prescriptions for the Schuster Slope project area, and is not intended to provide blanket approval for all work within wetland and other critical areas. Work within these critical areas may require additional review and documentation. Additional review and approval will be required by the City for any management activities that are proposed as being compliant with this document.
